Earth and Environmental Science

General Instructions
• Reading time – 5 minutes
• Working time – 3 hours
• Write using black or blue pen
  Black pen is preferred
• Draw diagrams using pencil
• Board-approved calculators may be used
• A Geological Time Scale is provided at the back of this paper
• Write your Centre Number and Student Number at the top of pages 17, 21, 25, 29 and 31

Total marks – 100

Section I  Pages 2–33
75 marks
This section has two parts, Part A and Part B

Part A – 20 marks
• Attempt Questions 1–20
• Allow about 35 minutes for this part

Part B – 55 marks
• Attempt Questions 21–30
• Allow about 1 hour and 40 minutes for this part

Section II  Pages 35–44
25 marks
• Attempt ONE question from Questions 31–34
• Allow about 45 minutes for this section
1. Which of the following best describes the lithosphere?

   (A) Layers of solid rock which occur within the earth
   (B) The upper fluid layer of the mantle which transports the tectonic plates
   (C) The combined layer of crust and solid upper mantle which forms the tectonic plates
   (D) The thin outermost layer of the earth which consists of both continental and oceanic crust

2. The sketch shows the direction of movement at three boundaries of the Pacific Plate.

   ![Sketch of plate boundaries](image)

   What are the types of boundaries at H, I and J?

<p>| | | |</p>

The diagram shows the relationship between earthquake magnitude and the number of earthquakes per year.

Newcastle was the location of the epicentre of a 5.6 magnitude earthquake in 1989.

On average, how often does an earthquake with the same magnitude as the Newcastle earthquake occur somewhere in the world?

(A) Every day
(B) Every week
(C) Every year
(D) Every ten years

In 2010, a series of volcanic eruptions in Iceland resulted in large ash clouds being ejected as high as 4000 metres. However, the ash did not reach the upper layers of the atmosphere.

Which of the following was the most likely result of this eruption?

(A) Cooler local temperatures for a short time
(B) Warmer local temperatures for a short time
(C) Cooler global temperatures for more than one year
(D) Warmer global temperatures for more than one year
The table compares the characteristics of three separate volcanic eruptions.

<table>
<thead>
<tr>
<th>Volcano</th>
<th>Main products of an eruption</th>
<th>Physical features of the volcanic region</th>
<th>Hazards associated with the volcano</th>
</tr>
</thead>
<tbody>
<tr>
<td>X</td>
<td>Basaltic lava; few or no pyroclastics</td>
<td>Round domes of quickly cooled lava; narrow, steep-sided valleys; hot springs and geysers</td>
<td>Poisonous gases</td>
</tr>
<tr>
<td>Y</td>
<td>Extensive, low viscosity lava flows, usually basalt</td>
<td>Volcanoes with gentle slopes and large bases; cinder cones on sides</td>
<td>Fast moving, large shallow lava flows</td>
</tr>
<tr>
<td>Z</td>
<td>High viscosity lava, ash, steam; 50% lava and 50% pyroclastics</td>
<td>Volcanoes steep-sided with alternating layers of andesitic lava and ash</td>
<td>Lahars, hot ash flows, high speed pyroclastic flows; poisonous gases; tsunamis</td>
</tr>
</tbody>
</table>

Which row of the table correctly matches each of the volcanoes with its likely tectonic setting?

Two examples of a geological feature are labelled X.

What is the geological feature at X?

(A) A normal fault at a divergent plate boundary
(B) A transform fault at a divergent plate boundary
(C) A normal fault at a conservative plate boundary
(D) A transform fault at a conservative plate boundary
8 Based on stable isotope data, when did the first life forms appear on Earth?

(A) $3.8 \times 10^3$ years ago

(B) $4.6 \times 10^6$ years ago

(C) $3.8 \times 10^9$ years ago

(D) $4.6 \times 10^{12}$ years ago

9 Which equation correctly shows the formation of ozone?

(A) $3\text{O}_2 \rightarrow 2\text{O}_3$

(B) $3\text{O}_2 \xrightarrow{\text{UV light}} 2\text{O}_3$

(C) $2\text{O}_3 \xrightarrow{\text{UV light}} 3\text{O}_2$

(D) $2\text{O}_3 \rightarrow 3\text{O}_2$

10 Which event is an example of a mass extinction?

(A) 10% of species from different groups become extinct across many environments

(B) 60% or more species unique to a particular region become extinct at the same time

(C) 10% of species unique to a particular region become extinct over a long period of time

(D) 60% or more species from different groups become extinct across many environments
Each of the Galapagos Islands, located off the coast of South America, has a different species of finch.

The diagram shows the variation in beak size and shape for seven of the finch species.

Which statement correctly explains the variation in beak types?

(A) During the finches’ lifetimes, the beaks changed to suit their diets.

(B) The different beaks evolved as finches on some islands interbred with other birds.

(C) Male finches with the largest beaks competed more successfully for mates, resulting in offspring with larger beaks.

(D) Different beak sizes and shapes enabled some finches to access a wider variety of foods, and these beak differences were passed on to offspring.
The table lists some isotopes and their half-lives.

<table>
<thead>
<tr>
<th>Isotope</th>
<th>Half-life (years)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Carbon-14</td>
<td>5730</td>
</tr>
<tr>
<td>Iodine-129</td>
<td>15.7 million</td>

<td>704 million</td>
</tr>
<tr>
<td>Rubidium-87</td>
<td>50 billion</td>
</tr>
</tbody>
</table>

Which isotope could be used to date a rock that was formed in the Cambrian Period?

(A) Carbon-14  
(B) Iodine-129  
(C) Uranium-235  
(D) Rubidium-87

The photograph shows a rock from Western Australia made up of alternating red and grey layers.

How was this rock formed?

(A) From the growth of cyanobacteria during the Mesozoic Era  
(B) From the growth of archaea during the early Proterozoic Eon  
(C) From alternating oxygen-rich and oxygen-poor waters in the early Proterozoic Eon  
(D) From alternating carbon-dioxide-rich and carbon-dioxide-poor waters in the Mesozoic Era
The diagrams show two stratigraphic columns in which some of the layers have been dated.

What is the most likely age of layer Y?

(A) 58 Ma BP
(B) Between 46 ±1 Ma BP and 55 ±2 Ma BP
(C) Older than the Triassic but younger than the Permian
(D) Older than the Permian but younger than the Devonian
15  The image shows a recently seeded paddock with the remains of the previous crop.

What is the reason for using the farming practice shown in the image?

(A) To reduce the rate of soil loss
(B) To replace the use of irrigation
(C) To prevent the formation of lateritic soils
(D) To prevent an increase in pest populations

16  A group of students performed an experiment in which they measured how long it took for 25 mL of water to soak into the ground at two locations. One location had compacted soil and the other location had non-compacted soil.

Which of the following would improve the scientific reliability of their experiment?

(A) Repeat the experiment several times at each location and obtain an average for each location.
(B) Ensure the air temperature and weather at each location are the same.
(C) Research and read scientific articles and books on the subject.
(D) Increase the volume of water for each test to 50 mL.
17 The diagrams show four stages in the treatment of waste water. The stages are not in the correct order.

What is the correct sequence of stages to treat waste water effectively?

(A) II, I, III, IV  
(B) IV, I, II, III  
(C) III, II, I, IV  
(D) II, IV, I, III

18 Which action would be the most effective in minimising the impact of salinity on a farm?

(A) Applying more fertilisers and herbicides  
(B) Introducing flood irrigation for the crops  
(C) Grazing fewer cattle than in previous years  
(D) Growing more trees on the surrounding hills

19 The chemical equation shown summarises a reaction that releases greenhouse gases into the atmosphere.

\[
\text{coal} + X \rightarrow Y + Z
\]

What are the substances X, Y and Z?

<table>

The diagram shows a foodweb for a farm growing corn, and the graph shows the change in peregrine falcon eggshell thickness over time.

In 1945 the insecticide DDT was introduced to combat insect pests. Data such as that shown in the graph prompted scientists to argue for the banning of DDT.

Based on the data given in the graph, what is one argument the scientists could have used for banning DDT?

(A) DDT affects non-target species.
(B) DDT affects the health of humans.
(C) DDT reduces the growth of producers.
(D) DDT reduces the food sources of peregrine falcons.
Question 21 (6 marks)
Question 21 (6 marks)

Australia and Antarctica began drifting apart about 30 million years ago, and are now separated by the Great Southern Ocean.

(a) Outline the tectonic process that has resulted in the present location of the two continents.

Question 27 (5 marks)

The graphs show the trends in major atmospheric pollutants at Cape Grim, Tasmania up to 2012.

Using information from the graphs, evaluate TWO named international strategies in combating the impacts of pollutants on the atmosphere.
Question 28 (6 marks)

Use this statement to answer parts (a)–(b).

The rate at which farmland resources in New South Wales are degrading has generally decreased as a result of improved land and water management.

(a) Describe ONE land management practice that would support the above conclusion.

........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................
........................................................................................................................................

(b) Describe ONE water management practice that would support the above conclusion.

<td>182</td>
</tr>
</tbody>
</table>

Question 30 continues on page 33
Question 30 (continued)

To what extent does Australia have to change environmental management practices, which have been used since human habitation, to reduce our contribution to a possible sixth mass extinction event? Use data from the map and table to support your arguments.

End of Question 30
2014 HIGHER SCHOOL CERTIFICATE EXAMINATION
Earth and Environmental Science

Section II

25 marks
Attempt ONE question from Questions 31–34
Allow about 45 minutes for this section

Answer parts (a)–(c) of the question in Section II Answer Booklet 1.
Answer parts (d)–(e) of the question in Section II Answer Booklet 2.
Extra writing booklets are available.

Pages

Question 31    Introduced Species and the Australian Environment ........ 36–37
Question 32    Organic Geology – A Non-renewable Resource ............... 38–40
Question 33    Mining and the Australian Environment ..................... 41–42
Question 34    Oceanography ................................................................. 43–44
Question 31 — Introduced Species and the Australian Environment (25 marks)

Answer parts (a)–(c) in Section II Answer Booklet 1.

(a) Describe TWO quarantine methods used in Australia. 3

(b) Explain how the features of a biological control method made it successful in eradicating a named pest. 4

(c) The graph shows the change in the habitat area occupied by an introduced species and the change in control strategies over time.

(i) How does the shape of the curve represent the changes in the area occupied by an introduced species over time? 2

(ii) For one introduced species, provide the reasons for the change in control strategies after point X on the graph. Use examples of these strategies in your answer. 4

Question 31 continues on page 37
Answer parts (d)–(e) in Section II Answer Booklet 2.

(d) (i) Based on research using secondary sources, write a conclusion that summarises the criteria that can be used to identify a species as ‘introduced’.

(ii) Write a scientific method, in point form, that could be used to investigate the impact of an introduced species on a named local environment.

(e) Explain, using examples, how past practices to control introduced species are changing in order to achieve sustainability of Australian ecosystems.
Question 32 — Organic Geology – A Non-renewable Resource (25 marks)

Answer parts (a)–(c) in Section II Answer Booklet 1.

(a) Name this type of trap and outline the functions of the layers X, Y and Z.

(b) Coal and petroleum are mixtures, and this determines the way they are refined. Describe how both coal and petroleum are refined to produce marketable and usable products.

Question 32 continues on page 39
Question 32 (continued)

(c) The table and the graph give data about three fossil fuels.

<table>
<thead>
<tr>
<th>Fuel</th>
<th>Energy content (kJ/g)</th>
<th>CO₂ released (mol/10³ kJ)</th>
<th>Known global reserves 2011 (billion tonnes)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gas</td>
<td>51.6</td>
<td>1.2</td>
<td>330</td>
</tr>
<tr>
<td>Oil</td>
<td>43.6</td>
<td>1.6</td>
<td>170</td>
</tr>
<tr>
<td>Coal</td>
<td>39.3</td>
<td>2.0</td>
<td>900</td>
</tr>
</tbody>
</table>

Market price of coal, gas and oil since 1995

(i) Compare these three fuels in terms of their energy content and market price.

(ii) Using the data given in the table and the graph, predict the future global use of these fossil fuels.

Acknowledgement: Adapted from The Conversation: A “frack” in the bridge from coal to gas. Reproduced with kind permission of Mike Sandiford

Question 32 continues on page 40
Question 32 (continued)

Answer parts (d)–(e) in Section II Answer Booklet 2.

(d) (i) Based on research using secondary sources, write a conclusion about the effects of the combustion of fossil fuels. 2

(ii) Write a scientific method, in point form, that could be used to distinguish between the products of complete and incomplete combustion of a named fossil fuel. 4

(e) Explain, using examples, how society’s dependence on fossil fuels is changing to ensure alternative energy sources will be utilised in the future. 6

End of Question 32
Question 33 — Mining and the Australian Environment (25 marks)

Answer parts (a)–(c) in Section II Answer Booklet 1.

(a) Name one metal deposit that could be found in the geological setting shown and outline THREE features of the deposit.

(b) Explain how geological factors and cost factors determine the economic value of a deposit.

Question 33 continues on page 42
Question 33 (continued)

(c) The graph shows the changes in exploration costs and income for a resource.

![Graph showing exploration costs and income over time with stages 1 to 4]

(i) What is the relationship between exploration costs and income for the resource shown?  

(ii) Explain the exploration methods that would be used in each of stage 1, stage 2 and stage 4.

Answer parts (d)–(e) in Section II Answer Booklet 2.

(d) (i) Based on research using secondary sources, write a conclusion about ONE method that is used to refine an ore from a mineral deposit.  

(ii) Write a scientific method, in point form, that could be used to distinguish between waste rock and an ore from a named mineral deposit.

(e) Explain, using examples, how past practices in the mining industry are changing in order to minimise environmental damage in the future.

End of Question 33
Question 34 — Oceanography (25 marks)

Answer parts (a)–(c) in Section II Answer Booklet 1.

(a) Describe TWO methods used to date ocean floors. 3

(b) Explain how differences in the physical properties of ocean water determine the nature of food chains in surface waters and those in deep water. 4

(c) The map shows global ocean currents and salinity levels in the oceans.

(i) Give TWO reasons for the changes in the ocean current at X. 2

(ii) Using information provided in the diagram, explain the circulation of the global ocean currents. 4

Question 34 continues on page 44
Question 34 (continued)

Answer parts (d)–(e) in Section II Answer Booklet 2.

(d) (i) Based on research using secondary sources, write a conclusion about the differences in the concentration of salts in ocean waters of different temperatures.

(ii) Write a scientific method, in point form, that could be used to compare the solubility of a named salt in water at different temperatures.

(e) Explain, using examples, how past management practices are changing to ensure the sustainability of our ocean resources.

End of paper
