Timber Products and Furniture Technologies

General Instructions

- Reading time – 5 minutes
- Working time – 1½ hours
- Write using black pen
- Draw diagrams using pencil
- Board-approved calculators may be used
- Write your Centre Number and Student Number at the top of page 5

Total marks – 40

Section I Pages 2–4

10 marks

- Attempt Questions 1–10
- Allow about 20 minutes for this section

Section II Pages 5–7

15 marks

- Attempt Questions 11–15
- Allow about 35 minutes for this section

Section III Page 9

15 marks

- Attempt Question 16
- Allow about 35 minutes for this section

Section I

10 marks

Attempt Questions 1–10

Allow about 20 minutes for this section

Use the multiple-choice answer sheet for Questions 1–10.

1 What is the purpose of the kerf on a saw blade?

- (A) To remove waste material
- (B) To reduce noise when cutting
- (C) To prevent the blade jamming
- (D) To reduce vibration when cutting

2

What type of mortise and tenon joint is shown?

- (A) Wedged
 - (B) Through
 - (C) Haunched
 - (D) Long and short shouldered
- 3 Which of the following adhesives would be the LEAST suitable for application in outdoor furniture?
- (A) PVA
 - (B) Epoxy resin
 - (C) Urea formaldehyde
 - (D) Resorcinol formaldehyde

- 4 In the conversion and preparation of timber, what does *ripping* refer to?
- (A) Cutting to length
 - (B) Cutting along the grain
 - (C) Cutting across the grain
 - (D) Cutting at any compound angle
- 5 Which of the following processes is *honing*?
- (A) Setting the teeth on a handsaw to create the kerf
 - (B) Sharpening of a scraper with a hardened steel rod
 - (C) Using a whetstone to finish sharpening of a tool blade
 - (D) Removing fine timber shavings with a hardened plate
- 6 What is the main advantage of air seasoning over kiln seasoning of timber?
- (A) Faster removal of moisture content
 - (B) Reduced expense due to lower energy input
 - (C) Increased control over final moisture content
 - (D) Increased stability due to slower moisture removal
- 7 What is the purpose of the ridges on the underside of a countersunk head chipboard screw?

- (A) To remove the need to pre-countersink the hole
- (B) To bind into the timber surface to prevent splitting
- (C) To slow the screw entry to avoid stripping the thread
- (D) To strengthen the screw head to allow removal and reuse

- 8** For which of the following would it be best to use a bandsaw blade with a high tooth per inch count and a thin width?
- (A) Fast cutting of stock
 - (B) Ripping thick sections
 - (C) Cutting round stock safely
 - (D) Cutting curves and thin stock
- 9** Which of the following lists three methods that can be used in the cutting of veneers?
- (A) Quarter slicing, rift slicing and back sawing
 - (B) Rift slicing, quarter slicing and rotary peeling
 - (C) Live sawing, quarter slicing and rotary peeling
 - (D) Rotary peeling, tangential sawing and rift slicing
- 10** Why should grain direction be considered before thicknessing?
- (A) To improve cutting speed
 - (B) To reduce wear on the blades
 - (C) To minimise tearing of the grain
 - (D) To reduce the noise of cutting operations
