

<b>Training Package</b>	Electrotechnology (UEE07)		<b>HSC Requirements and Advice</b>
<b>Unit title</b>	<b>Carry out basic repairs to electronic apparatus by replacement of components</b>		<b>HSC Indicative Hours</b>
<b>Unit code</b>	<b>UEENEEH002B</b>	<b>Competency field</b>	Electronics
			<b>30</b>

<b>Unit descriptor</b>	This unit deals the replacement of electronic component, cabling an sub systems of electronic apparatus. It encompasses safe working practices, following written and oral instruction and procedures, basic testing and techniques, dismantling and assembling apparatus and disconnecting and reconnecting components.
<b>Application of the unit</b>	This unit may apply to persons entering work in electrotechnology and may be used in school based vocational programs.
<b>Employability skills</b>	The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skills requirements.
<b>Prerequisite unit(s)</b>	<p><b>Competencies</b></p> <p>Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:</p> <ul style="list-style-type: none"> <li>• UEENEEE002B Dismantle, assemble and fabricate electro technology components.</li> </ul> <p>For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2 [of UEE07 Training Package].</p>
	<p><b>Literacy and numeracy skills</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in <i>Appendix 1</i> of this Syllabus.</p> <p>Reading    3                      Writing    3                      Numeracy    3</p>
<b>Licence to practise</b>	<p>The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p> <p>Note:</p> <ol style="list-style-type: none"> <li>1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.</li> <li>2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.</li> </ol>

## Required Skills and Knowledge

This describes the essential skills and knowledge and their level **required** for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out basic repairs to electronic apparatus by replacement of components.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

The extent of the essential knowledge and associated skills (EKAS) required is given in *Appendix 2* of this Syllabus. It forms an integral part of this unit.

- 2.1.8 Electronic cable and conductor terminations
- 2.9.1.1 Electronic component basics
- 2.11.11.1 Electronic soldering equipment and techniques
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic safe working practices.

## Evidence Guide

This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of assessment	Critical aspects of evidence required to demonstrate competency in this unit
<p>Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.</p> <p>Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.</p> <p>The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.</p> <p>Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.</p>	<p>Before the critical aspects of evidence are considered all prerequisites must be met.</p> <p>Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE07'. Evidence shall also comprise:</p> <ul style="list-style-type: none"> <li>• a representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to: <ul style="list-style-type: none"> <li>- implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement</li> <li>- apply sustainable energy principles and practices as specified in the performance criteria and Range Statement</li> <li>- demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.</li> <li>- demonstrate an appropriate level of skills enabling employment</li> <li>- conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures</li> </ul> </li> <li>• demonstrated consistent performance across a representative range of contexts from the prescribed items below: <ul style="list-style-type: none"> <li>- carry out basic repairs to electronic apparatus by replacement of components as described in the Range Statement and including: <ul style="list-style-type: none"> <li>▪ following manufacturer service instructions for access to components</li> <li>▪ removing at least three different types of components specified in the work instructions.</li> <li>▪ replacing components to manufacturer requirements</li> <li>▪ terminating correctly electronic cables using solderless termination techniques</li> <li>▪ de-soldering and soldering to a high reliability standard and without damage to components.</li> <li>▪ reassembling the apparatus correctly</li> <li>▪ testing apparatus operation</li> <li>▪ dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.</li> </ul> </li> </ul> </li> </ul> <p>Note: Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.</p>

### Evidence Guide cont/d

Context of and specific resources for assessment	Method of assessment	Concurrent assessment and relationship with other units
<p>This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace.</p> <p>This should include:</p> <ul style="list-style-type: none"> <li>• OHS policy and work procedures and instructions</li> <li>• suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.</li> </ul> <p>These should be used in the formal learning/assessment environment.</p> <p>Note: Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.</p> <p>The resources used for assessment should reflect current industry practices in relation to carrying out basic repairs to electronic apparatus by replacement of components.</p>	<p>This unit shall be assessed by methods given in <i>Appendix 3</i> of this Syllabus.</p> <p>Note: Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.</p>	<p>For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:</p> <ul style="list-style-type: none"> <li>• UEENEEE002B Dismantle, assemble and fabricate electrotechnology components.</li> </ul>

Element	Performance Criteria	Range Statement
1 Prepare to repair electronic apparatus	1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.	<p>This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.</p> <p>This unit shall be demonstrated in relation to carrying out basic repairs electronic apparatus limited to replacement or repair of components, including sub systems in which the fault has been previously established.</p> <p>At least two of the repairs shall require soldering and desoldering and at least two of the repairs shall require a cable to be correctly terminated using a solderless termination technique.</p> <p>Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in <i>Appendix 4</i> of this Syllabus.</p>
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.	
	1.3 The nature of the repair is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.	
	1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.	
	1.5 Sources of materials that may be required for the work are established in accordance with established routines and procedures.	
	1.6 Tools, apparatus and testing devices needed to carry out the work are obtained and checked for correct operation and safety.	
2 Repair electronic apparatus	2.1 Established OHS risk control measures and procedures for carrying out the work are followed.	
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.	
	2.3 Circuits/apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures.	
	2.4 Apparatus is dismantled in accordance with manufacturer's guide and supervisor's instructions.	
	2.5 Component parts are tagged during the dismantling to help ensure correct and efficient reassembly and stored to protect them against loss or damage.	

Element	Performance Criteria	Range Statement
	2.6 Repairs are affected efficiently without damage to other components, apparatus or circuits.	
	2.7 Apparatus is assembled in an appropriate sequence with all components parts placed, secured and connected in accordance with manufacturer's guide or industry practice.	
	2.8 Procedures for referring non-routine events to immediate supervisor for directions are followed.	
	2.9 Repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.	
3 Complete and report repair work activities	3.1 OHS work completion risk control measures and procedures are followed.	
	3.2 Repaired apparatus is prepared and forwarded to appropriate person(s) for testing.	
	3.3 Work area is cleaned and made safe in accordance with established procedures.	
	3.4 Work supervisor is notified of the completion of the repair work in accordance with established procedures.
