

Start here.

Businesses in the Automotive repair industry are addressing the challenge of significant changes in technology, materials, repair techniques because as ~~as~~ every new car gets released, it also has the newest technology, to have a sustainable Automotive repair business it is essential for it to be able to adapt to the new technology ~~that~~ & also abide by the environmental practices & regulations in place.

By improving the technology in the business it is vital to have staff trained to be able to use & understand it & that they to are able to adapt & understand the new coming technology in the industry. This could prove as a challenge to some businesses because not only ~~do~~ do they want to hire staff who are practical & hard working but they

also need staff who are technology savvy & that are willing to ~~do~~ understand it.

As every new technology is ~~rele~~ released training is also provided to help businesses to understand & be able to work with it. whether its an online course or a & meeting convention it is vital that at least someone in the workshop goes & does it so they can understand & explain to other co-workers how it works.

With the new technologys coming out it has changed the way an Automotive business works, not only is it engine rebuilds, wheel bearings etc. ~~But~~ diagnostic trouble shooting is essential to learn, E.g. engine light is on & in a 2013 VE commodore ute, to diagnose the issue plug the & Computer into the cars ECU & it will send information to & from the car

Additional writing space on back page.

It will produce a code on the screen eg P1203. In this case the code that was produced is ~~as~~ telling us that there is something wrong with the O<sub>2</sub> sensor, this could mean that the exhaust fumes could be too rich or too lean in fuel & air. With further testing it will be determined which is the ~~error~~ cause. Now once the issue is fixed you can erase the trouble code ~~of~~ out of the car's ECU system & the engine light will be erased. With the new technology it has made it more time efficient & cleaner to ~~do the~~ ~~job~~ find the issue. With this being more time efficient it increases productivity which therefore increases the business's profitability.

Although the technology used is costly & sometimes quite hard to understand it is vital ~~to~~ for a business to adapt to it because this is the future for the automotive industry.
