

Question 22 (4 marks)

The flowchart shows a number of processes that are involved in the production of flour from wheat.

- (a) Identify THREE processes from the flowchart in which the raw material, wheat, is transformed into flour. 2

Condition grain, grinding and sifting

- (b) Describe ONE process used to transform wheat into flour. 2

Sifting. This is when the product from grinding stage is pushed through a mesh to distinguish different parts (due to size) of the wheat. e.g. flour from husks.
