

Question 22 (4 marks)

The flowchart shows a number of processes that are involved in the production of flour from wheat.

- (a) Identify THREE processes from the flowchart in which the raw material, wheat, is transformed into flour. 2

Clean grain, grinding, sifting

- (b) Describe ONE process used to transform wheat into flour. 2

Sifting allows large clumps of flour to be separated. This allows a consistent texture and uniformity of the flour, allowing for a higher quality product.
