

Question 22 (4 marks)

The flowchart shows a number of processes that are involved in the production of flour from wheat.

- (a) Identify THREE processes from the flowchart in which the raw material, wheat, is transformed into flour. 2

Condition grain, Grinding, Sifting.

- (b) Describe ONE process used to transform wheat into flour. 2

Sifting is a separation process, in the production of flour, wheat is sifted to remove any impurities and decrease the density of the product by aeration. Sifting involves the wheat being pushed through a large mesh.
