

Analyses research and relates it to the intent of the major project.

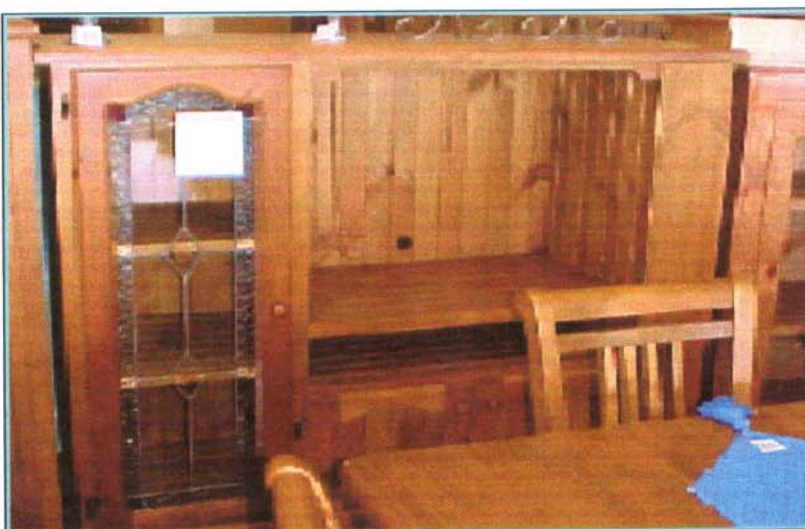

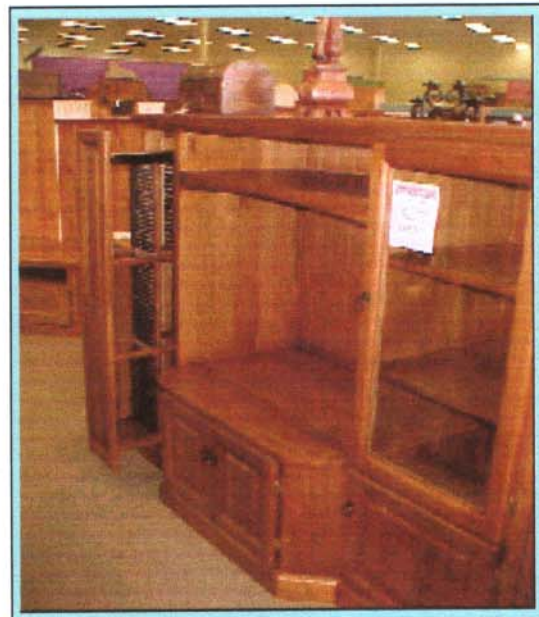

PAGE 2

## Possible design solutions

The first design solution has a very interesting shape to it.

- The base of the unit comes out at a 45 degree angle which creates a different effect and gives the TV a greater surface area to sit on.
- The CD rack is also an effective design although the unit does not have a compartment for a CD player.
- Very plain and neat unit.
- It's best feature is the 45 degree front that I find very effective.
- This picture is taken from a 'Timberline' furniture shop which deal in producing timber products for the home.
- Structure of this unit is very basic and straight forward. More effort should be put in place to make it stronger and durable although it does look strong. Internal structure has to be stronger.

Design solution 2 has a plane but also effective appearance.

- The highlight of this unit is the lead lighting used in the cabinet door. With out this effect the unit would be rather boring
- Structural aspects are very good. It is built with great strength which is with great help when planning construct of mine.
- The lead lighting and overall construct of this unit are helpful ideas that are worth while to consider in this project.
