

Student Evaluation

Overall, I was pleased with my efforts. I put in a lot of extra time during woodwork lessons, free periods and in sport time. Most of my problems were relatively easy to solve, and I did so with confidence in my ability. I like the way my design was transferred from my head; to paper; to wood.

My folio was completed by the use of a computer and of taking photos and of the drawings.

I like the way I used the router on the bed head slats it gives the bed a better effect when you are looking at it. The size of the bed is a perfect size for me and that is a queen size bed and is going to be every useful for me.

I enjoyed making my bed and im eagerly waiting to bring it home and use it.
