Band 5/6 Sample 1

2014 HIGHER SCHOOL CERTIFICATE EXAMINATION Mathematics General 2

Section II

75 marks Attempt Questions 26–30 Allow about 1 hour and 55 minutes for this section

Answer the questions in the spaces provided.

Your responses should include relevant mathematical reasoning and/or calculations.

Extra writing space is provided on pages 33 and 34. If you use this space, clearly indicate which question you are answering.

Question 26 (15 marks)

Expand $4x(7x^4 - x^2)$. (a) 1 - 4x Calculate the value of h correct to two decimal places. 2 h NOT TO SCALE 5 28° 5 in28 Solve the equation $\frac{5x+1}{3} - 4 = 5 - 7x$. 3 (0) 5 XC 6 _____ -6 Question 26 continues on page 15

- 14 -

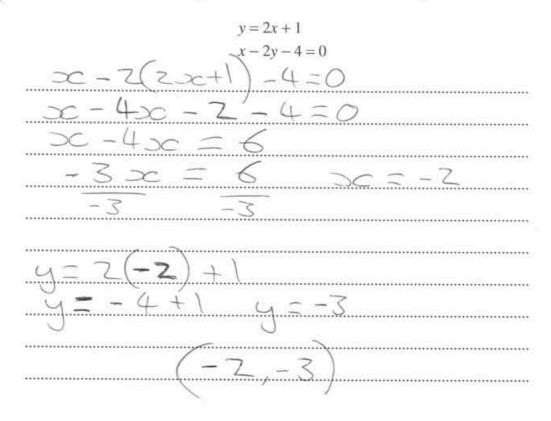

3

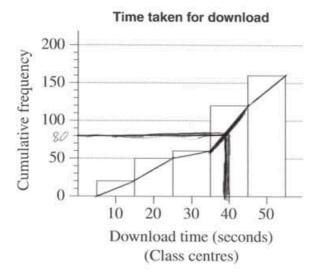

Question 26 (continued)

Solve these simultaneous equations to find the values of *x* and *y*.

(e) The times taken for 160 music downloads were recorded, grouped into classes and then displayed using the cumulative frequency histogram shown. 2

On the diagram, draw the lines that are needed to find the median download time.

Question 26 continues on page 16

Office Use Only - Do NOT write anything, or make any marks below this line.

Question 26 (continued)

(f) The weight of an object on the moon varies directly with its weight on Earth. An astronaut who weighs 84 kg on Earth weighs only 14 kg on the moon.

A lunar landing craft weighs 2449 kg when on the moon. Calculate the weight of this landing craft when on Earth.

M=KN
M = Kn $14 = K84$ $K = \frac{14}{84}$ $K = \frac{14}{16}$
2449= 1/6 × n: n= 2449 - 1/6
: n=14694 kg when
landing on Earth

Question 27 (15 marks)

(a) Alex is buying a used car which has a sale price of \$13 380. In addition to the sale price there are the following costs:

Transfer of registration\$30Stamp Duty......

 Stamp Duty for this car is calculated at \$3 for every \$100, or part thereof, of the sale price.

Calculate the Stamp Duty payable.

13380-100 = A-5550 100 X

(ii) Alex borrows the total amount to be paid for the car including Stamp Duty and transfer of registration. Interest on the loan is charged at a flat rate of 7.5% per annum. The loan is to be repaid in equal monthly instalments over 3 years.

Calculate Alex's monthly repayments.

80

Question 27 continues on page 19

- 18 -

Question 27 (continued)

(iii) Alex wishes to take out comprehensive insurance for the car for 12 months. The cost of comprehensive insurance is calculated using the following: 3

1

Base rate	\$845
Fire Service Levy (FSL)	1% of base rate
Stamp Duty	5.5% of the total of base rate and FSL
GST	10% of the total of base rate and FSL.

Find the total amount that Alex will need to pay for comprehensive insurance.

	845 + 8.45
	$\frac{1}{100} \times 845 = 8.45$
	$0.055 \times 853.45 = 46.94$
	0.1 x 853.45 = 85.35
	845 + 8.45 + 46.94 + 85.35 = \$ 985.74
(iv)	Alex has decided he will take out the comprehensive car insurance rather than the less expensive non-compulsory third-party car insurance.
	What extra cover is provided by the comprehensive car insurance? The fine service (erg (ESL)

Question 27 (continued)

(b) Xuso is comparing the costs of two different ways of travelling to university.

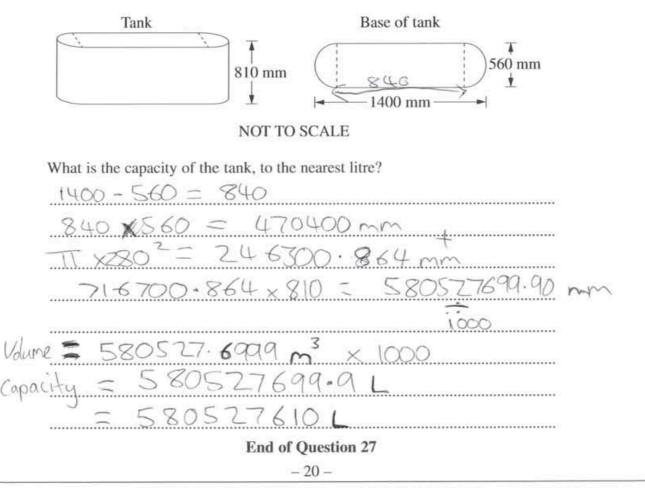

Xuso's motorcycle uses one litre of fuel for every 17 km travelled. The cost of fuel is \$1.67/L and the distance from her home to the university car park is 34 km. The cost of travelling by bus is \$36.40 for 10 single trips.

Which way of travelling is cheaper and by how much? Support your answer with calculations.

(c) The base of a water tank is in the shape of a rectangle with a semicircle at each end, as shown.

The tank is 1400 mm long, 560 mm wide, and has a height of 810 mm.

Question 30 (15 marks)

(a) Chandra and Sascha plan to have \$20 000 in an investment account in 15 years time for their grandchild's university fees.

3

The interest rate for the investment account will be fixed at 3% per annum compounded monthly.

Calculate the amount that they will need to deposit into the account now in order to achieve their plan.

A = P(1+r) - 15x1z = 180
$20\ 000 = P\left(1+\frac{0.03}{12}\right)^{180}$
$P \simeq \frac{20000}{(1+\frac{632}{2})^{160}}$
P=\$12759.73

of

DO INOT WHICH HIS AICA.

1

Question 30 (continued)

(b) The scatterplot shows the relationship between expenditure per primary school student, as a percentage of a country's Gross Domestic Product (GDP), and the life expectancy in years for 15 countries.

(i) For the given data, the correlation coefficient, r, is 0.83. What does this indicate about the relationship between expenditure per primary school student and life expectancy for the 15 countries?

diture per 0 mary SC correlation

Question 30 continues on page 31

Question 30 (continued)

(ii) For the data representing expenditure per primary school student, Q_L is 8.4 1 and Q_U is 22.5.

What is the interquartile range?

22.5-8.4 = 14.1

(iii) Another country has an expenditure per primary school student of 47.6% of its GDP. Would this country be an outlier for this set of data? Justify your answer with calculations.

24.9 2 5-9,7,7+5,8-5,1+2,1+2,13-8,17.0,188,2122,225 2.5+ oo Yes 47-6% 15 an 1QR= 4.1

(iv) The expenditures per primary school student for the 15 countries in the scatterplot are:

2

2

5.9, 7, 7.6, 8.4, 11.2, 11.2, 13.7, 17.1, 18.7, 21.1, 22, 22.5, 23.2, 24.9, 27.6

Complete the table below by calculating the mean, \overline{x} , and the standard deviation, σ_x , of these data. Calculate both values to two decimal places.

The table also shows the mean, \overline{y} , and the standard deviation, σ_y , of life expectancy for the same 15 countries.

	Mean	Standard deviation
Expenditure per primary school student	$\overline{x} = 6/4$	σ _x = 7.03 7.03
Life expectancy	$\bar{y} = 70.73$	$\sigma_y = 10.94$

Question 30 continues on page 32

2

X

Question 30 (continued)

 Using the values from the table in part (iv), show that the equation of the least-squares line of best fit is

119.0 00 (vi) On the scatterplot on page 30, draw the least-squares line of best fit, 2 y = 1.29x + 49.9. Using this line, or otherwise, estimate the life expectancy in a country 1 (vii) which has an expenditure per primary school student of 18% of its GDP. years (viii) Why is this line NOT useful for predicting life expectancy in a country 1 which has expenditure per primary school student of 60% of its GDP? So we cannot expectancy
