1 Introduction

This support document has been designed to help teachers understand key aspects of the new *Graphics Technology Years 7–10 Syllabus* and to provide guidance for implementation. The document shows how these aspects can be incorporated in teaching and learning programs, and how these programs are underpinned by the principles of *assessment for learning* (*Graphics Technology Years 7–10 Syllabus*, page 61).

The document provides advice about constructing a program that will cover the scope of Graphics Technology for a stage. It sets out a process for planning and sequencing units of work, and developing teaching and learning activities.

The sample stage program plans and the sample units of work in this document demonstrate ways in which teachers can build a teaching and learning program and develop units of work to ensure coverage of the scope of the syllabus.

The document contains three sample Stage 5 units of work:

- Core Module 1 – Children’s Toys
- Core Module 2 – Household Appliances
- Option Module – Engineering Drawing – Clamping and Holding Devices.

These sample units can be used as models for planning units of work. They include:

- relevant outcomes and content
- assessment activities that have been designed and integrated into the units of work
- different types of possible feedback
- a variety of teaching and learning experiences
- opportunities for student reflection.

An assessment activity from each unit has been selected to show how assessment can fit into teaching and learning sequences. They are described in some detail to illustrate the process of *assessment for learning*. Teachers would not provide this level of detail in day-to-day classroom situations. The units of work and activities may be modified or amended to suit the needs, interests and abilities of students.

For a small percentage of students with special education needs who are undertaking Life Skills outcomes and content, support materials will be provided which will assist in the development of a meaningful and relevant program of study related to the *Graphics Technology Years 7–10 Syllabus*. Units of work adapted for students undertaking Graphics Technology Life Skills will be included in a consolidated document that will be distributed to schools early in 2004.

2 Establishing a Scope and Sequence Plan

A fundamental step in the design of effective teaching and learning programs is the development of a scope and sequence plan. This plan provides an overview of the units to be taught and details the placement, sequence and duration of units. When establishing a scope and sequence plan, teachers should consider the following.

Syllabus requirements

The major emphasis of the *Graphics Technology Years 7–10 Syllabus* is on the design, development and production of graphical presentations. The syllabus promotes a ‘learning through doing’ approach to content delivery and requires the active engagement of students in the production of graphical presentations throughout the course.

The course content is divided into two core modules (compulsory for both 100-hour and 200-hour courses) and thirteen option modules (of which four must be studied in a 200-hour course). In selecting and sequencing option modules teachers should ensure that the learning experiences:

- build on previous learning experiences that increase in sophistication and student autonomy as students progress through the course
- provide a range of experiences over the course
- cater for the needs, interests and abilities of students and/or for areas of community significance
- provide an avenue for the delivery of all essential syllabus content
- can effectively be undertaken in accordance with relevant guidelines and directives of their education authorities and/or schools.

Flexibility

When planning implementation of the syllabus, teachers should consider which model best suits their school curriculum structure and allows for the most effective use of resources. To assist with this, the syllabus structure allows for the sequential delivery of modules (semesterised program) or the concurrent delivery of modules (yearly program). Concurrent delivery of modules also allows for a thematic approach to the programming of syllabus content.

Assessment

When planning projects or themes teachers should consider:

- which sections of essential content will be addressed by each project
- the range of outcomes to be assessed
- the range of assessment strategies to be employed.

Individual assessment activities need not necessarily address complete outcomes but may focus on parts or combinations of outcomes. However, it is essential that all outcomes are fully addressed by the end of the course – whether it is a 100-hour or 200-hour course.

It takes many weeks’ work to produce graphical presentations of a substantial nature. When assessing these presentations, teachers should reflect on the principles of assessment for learning and their observations of students during the unit. That is, they should not focus solely on the completed presentation. Teachers may consider other elements of students’ work practices, such as cooperative work practices, self-direction and time management in the overall assessment of the presentations.

Further considerations

Teachers need to be aware of and follow the relevant guidelines and directives of their education authorities and/or schools. Teaching programs should recognise and reflect relevant State and Commonwealth legislation, regulations and standards including Occupational Health and Safety, Chemical Safety in Schools and Animal Welfare guidelines. Teachers need to be aware of activities that may require notification, certification, permission, permits and licences.

2.1 Sample Stage 5 Scope and Sequence Plan

The scope and sequence information presented in the following example provides an overview for a 200-hour course for Stage 5. The delivery of the course content in Core Modules 1 and 2 has a thematic approach, while in the option modules the delivery is through the modules' specific focuses.

The model presented illustrates the sequential delivery of modules. However, teachers could choose to deliver modules concurrently by integrating the content of two or more modules into an overall theme.

There are opportunities to address aspects of all syllabus outcomes in each unit of work. However, teachers could choose to place particular emphasis on specific outcomes in individual units of work. Regardless of the approach taken by a teacher, it is essential that all outcomes are addressed by the completion of the course.

Term	Year 9	Year 10
1	Core Module 1 Unit 1: Logos and Pictograms (5 weeks) Outcomes: 5.1.1, 5.1.2, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1, 5.6.2 Unit 2: Communication Devices (8 weeks) Outcomes: 5.1.1, 5.2.1, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1	Option 1: Computer Aided Design and Drafting (10 weeks) Outcomes: 5.1.2, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.4.2, 5.5.1, 5.5.2, 5.6.1, 5.6.2
2	Unit 3: Children's Toys (7 weeks) Outcomes: 5.1.1, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1	Option 2: Engineering Drawing (10 weeks) Outcomes: 5.1.1, 5.1.2, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1, 5.6.2
3	Core Module 2 Unit 4: Household Appliances (7 weeks) Outcomes: 5.1.1, 5.1.2, 5.2.1, 5.3.1, 5.3.2, 5.4.1, 5.4.2, 5.5.2, 5.6.1 Unit 5: Transportation (7 weeks) Outcomes: 5.1.1, 5.2.1, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1, 5.6.2 Unit 6: Packaging (6 weeks) Outcomes: 5.1.1, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1, 5.6.2	Option 3: Cabinet and Furniture Drawing (10 weeks) Outcomes: 5.1.1, 5.1.2, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1, 5.6.2
4		Option 4: Australian Architecture (10 weeks) Outcomes: 5.1.1, 5.1.2, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1, 5.6.2

Note: Children's Toys, Household Appliances and Engineering Drawing are described in detail in the following pages.

2.2 Stage 5 Unit Overviews

Year 9

Core Module 1

<p>Unit 1:</p> <p>Logos and Pictograms</p> <p>(5 weeks)</p> <p>Outcomes: 5.1.1, 5.1.2, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1, 5.6.2</p>	<p>Students are introduced to elementary drafting techniques and the use and care of both manual and computer-based drafting equipment. Through the production of a variety of logos and pictograms they learn how to perform geometric constructions including the drafting of regular geometric shapes, division of lines and transfer of distances. They learn about the design of logos and pictograms and their importance to everyday communication. The unit also provides scope to introduce the social implications of the production of graphical images.</p>
<p>Unit 2:</p> <p>Communication Devices</p> <p>(8 weeks)</p> <p>Outcomes: 5.1.1, 5.2.1, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1</p>	<p>Students focus on the production of drawings of common communication devices such as clock radios, cassette players and mobile phones. They become practised in the principles of orthogonal and pictorial drawing and the associated standards and conventions. They become aware of and apply standards for dimensioning, and understand and apply scales in the production of drawings. Students also further develop their skills in the production of freehand, manual and computer-based drafting techniques.</p>
<p>Unit 3:</p> <p>Children's Toys</p> <p>(7 weeks)</p> <p>Outcomes: 5.1.1, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.5.2, 5.6.1</p>	<p>Students work towards the development of presentation drawings that could be used to market a concept for a new toy design to a prospective manufacturer. Building on the experiences of the previous two modules, students further develop their skills in the production of drawings through the use of both manual and computer-based drafting technologies. A particular emphasis is placed on pictorial drawing and the development of skills in rendering, and the selection and use of appropriate presentation styles and techniques for the purposes of marketing.</p>

Year 9

Core Module 2

<p>Unit 4: Household Appliances (7 weeks) Outcomes: 5.1.1, 5.1.2, 5.2.1, 5.3.1, 5.3.2, 5.4.1, 5.4.2, 5.5.2, 5.6.1</p>	<p>Students focus on the production of drawings of common household appliances. Through the production of drawings of common household appliances such as toasters, hair dryers and microwave ovens, students refine skills in pictorial and orthogonal drawing techniques. Using a suitable CAD package they learn about 3D modelling and prepare a 3D model of a selected appliance. They learn about multimedia presentation techniques and integrate graphics and drawings into a multimedia presentation of their own design.</p>
<p>Unit 5: Transportation (7 weeks) Outcomes: 5.1.1, 5.2.1, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1, 5.6.2</p>	<p>Using transportation devices and their components as a basis for the drawings produced in this unit, students build on previous experiences in orthogonal projection. They are introduced to assembly drawings, sectional views and engineering drawing standards and conventions. They gain experience in the use of a variety of available templates used to reproduce common drawing elements. Students also gain experience in the production of engineering drawings in both the manual and CAD environments. They investigate the work of engineers and the application of graphics to the field of engineering.</p>
<p>Unit 6: Packaging (6 weeks) Outcomes: 5.1.1, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1, 5.6.2</p>	<p>Following a theme of packaging, this unit has an emphasis on ‘Design in Graphics’, which includes design principles and processes, research and collaborative work environments. Students are introduced to and become practised in the production of developments of geometric solids. They are also introduced to perspective pictorial drawing. Skills in isometric projection and rendering, developed in previous units, are also enhanced throughout this unit. Students investigate the work of graphic designers, in particular their role in the design and development of product packaging. As in previous units students are engaged in producing drawings using both manual and computer-based drafting technologies.</p>

Year 10

<p>Option Module 1: Computer Aided Design and Drafting (10 weeks)</p> <p>Outcomes: 5.1.2, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.4.2, 5.5.1, 5.5.2, 5.6.1, 5.6.2</p>	<p>This module extends students' knowledge and understanding of, and skills in, graphics technology with a particular emphasis on the standards and presentation methods used in Computer Aided Design and Drafting.</p> <p>In this unit students undertake a consolidated study of the application and use of computer-based design and drafting technologies. They produce a range of computer-generated graphical images for design, production and manufacturing purposes.</p>
<p>Option Module 2: Engineering Drawing (10 weeks)</p> <p>Outcomes: 5.1.1, 5.1.2, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1, 5.6.2</p>	<p>The Engineering Drawing module extends students' knowledge and understanding of, and skills in, graphics technology with a particular emphasis on the standards and presentation methods used in engineering.</p> <p>The unit focuses on the production of a range of engineering drawings to illustrate a variety of clamping and holding devices commonly found in the school workshop. Students develop further knowledge and skills in both manual and computer-based drafting techniques.</p>
<p>Option Module 3: Cabinet and Furniture Drawing (10 weeks)</p> <p>Outcomes: 5.1.1, 5.1.2, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1, 5.6.2</p>	<p>The Cabinet and Furniture Drawing module extends students' knowledge and understanding of, and skills in, graphics technology with a particular emphasis on the standards and presentation methods used in the furniture and cabinet-making industries.</p> <p>The unit focuses on the development of working drawings suitable for use in the manufacture and assembly of a range of furniture products. Students also investigate the use of drawings in assembly instructions for ready-to-assemble products.</p>
<p>Option Module 4: Australian Architecture (10 weeks)</p> <p>Outcomes: 5.1.1, 5.1.2, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.6.1, 5.6.2</p>	<p>This module extends students' knowledge and understanding of, and skills in, graphics technology with a particular emphasis on Australian architecture, its standards, building characteristics and historical qualities.</p> <p>Students apply acquired knowledge and skills to the development of site plans, floor plans, elevations and detail drawings. They also investigate in detail Australian architectural styles and the influences on Australian building design.</p>

3 Advice on Assessment

3.1 Assessment for Learning

The Board's revised syllabuses advocate *assessment for learning*. Assessment that enhances learning recognises that learners use their current understanding to discover, develop and incorporate new knowledge, understanding and skills. *Assessment for learning* helps teachers and students to know if that current understanding is a suitable basis for future learning.

Assessment occurs as an integral part of teaching and learning. Teacher instruction and assessment influence student learning and learning processes. This involves using assessment activities to clarify student understanding of concepts, and planning ways to remedy misconceptions and promote deeper understanding.

Assessment for learning encourages self-assessment and peer assessment. Students can develop and use a range of strategies to actively monitor and evaluate their own learning and the learning strategies they use.

The feedback that students receive from completing assessment activities will help teachers and students decide whether they are ready for the next phase of learning or whether they need further learning experiences to consolidate their knowledge, understanding and skills. Teachers should consider the effect that assessment and feedback have on student motivation and self-esteem, and the importance of the active involvement of students in their own learning.

By integrating learning and assessment, the teacher can choose which aspects of a student's performance to record. These records can be used to monitor the student's progress, determine what to teach next and decide the level of detail to be covered. At key points, such as the end of the year, this information is also available for the teacher to use to form a judgement of the student's performance against levels of achievement. This judgement can be used to inform parents, the next teacher and especially the student, of the student's progress. Consequently, teachers using their professional judgement in a standards-referenced framework are able to extend the process of *assessment for learning* into the assessment of learning.

Principles of assessment for learning

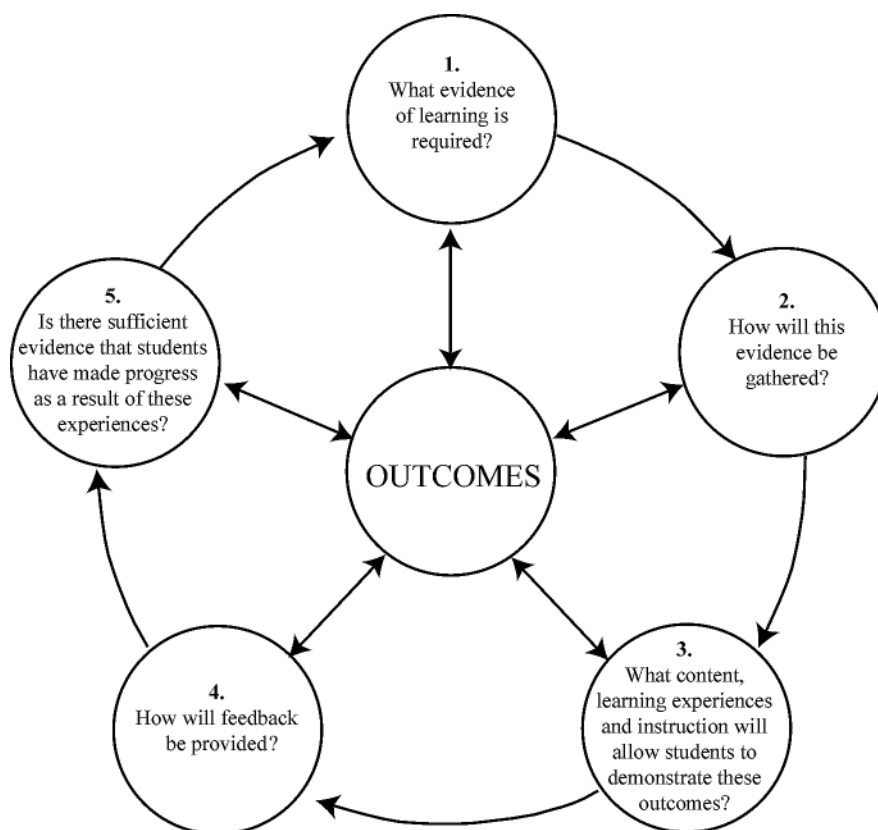

Assessment for learning:

- AP1 emphasises the interactions between learning and manageable assessment strategies that promote learning
- AP2 clearly expresses for the student and teacher the goals of the learning activity
- AP3 reflects a view of learning in which assessment helps students learn better, rather than just achieve a better mark
- AP4 provides ways for students to use feedback from assessment
- AP5 helps students take responsibility for their own learning
- AP6 is inclusive of all learners.

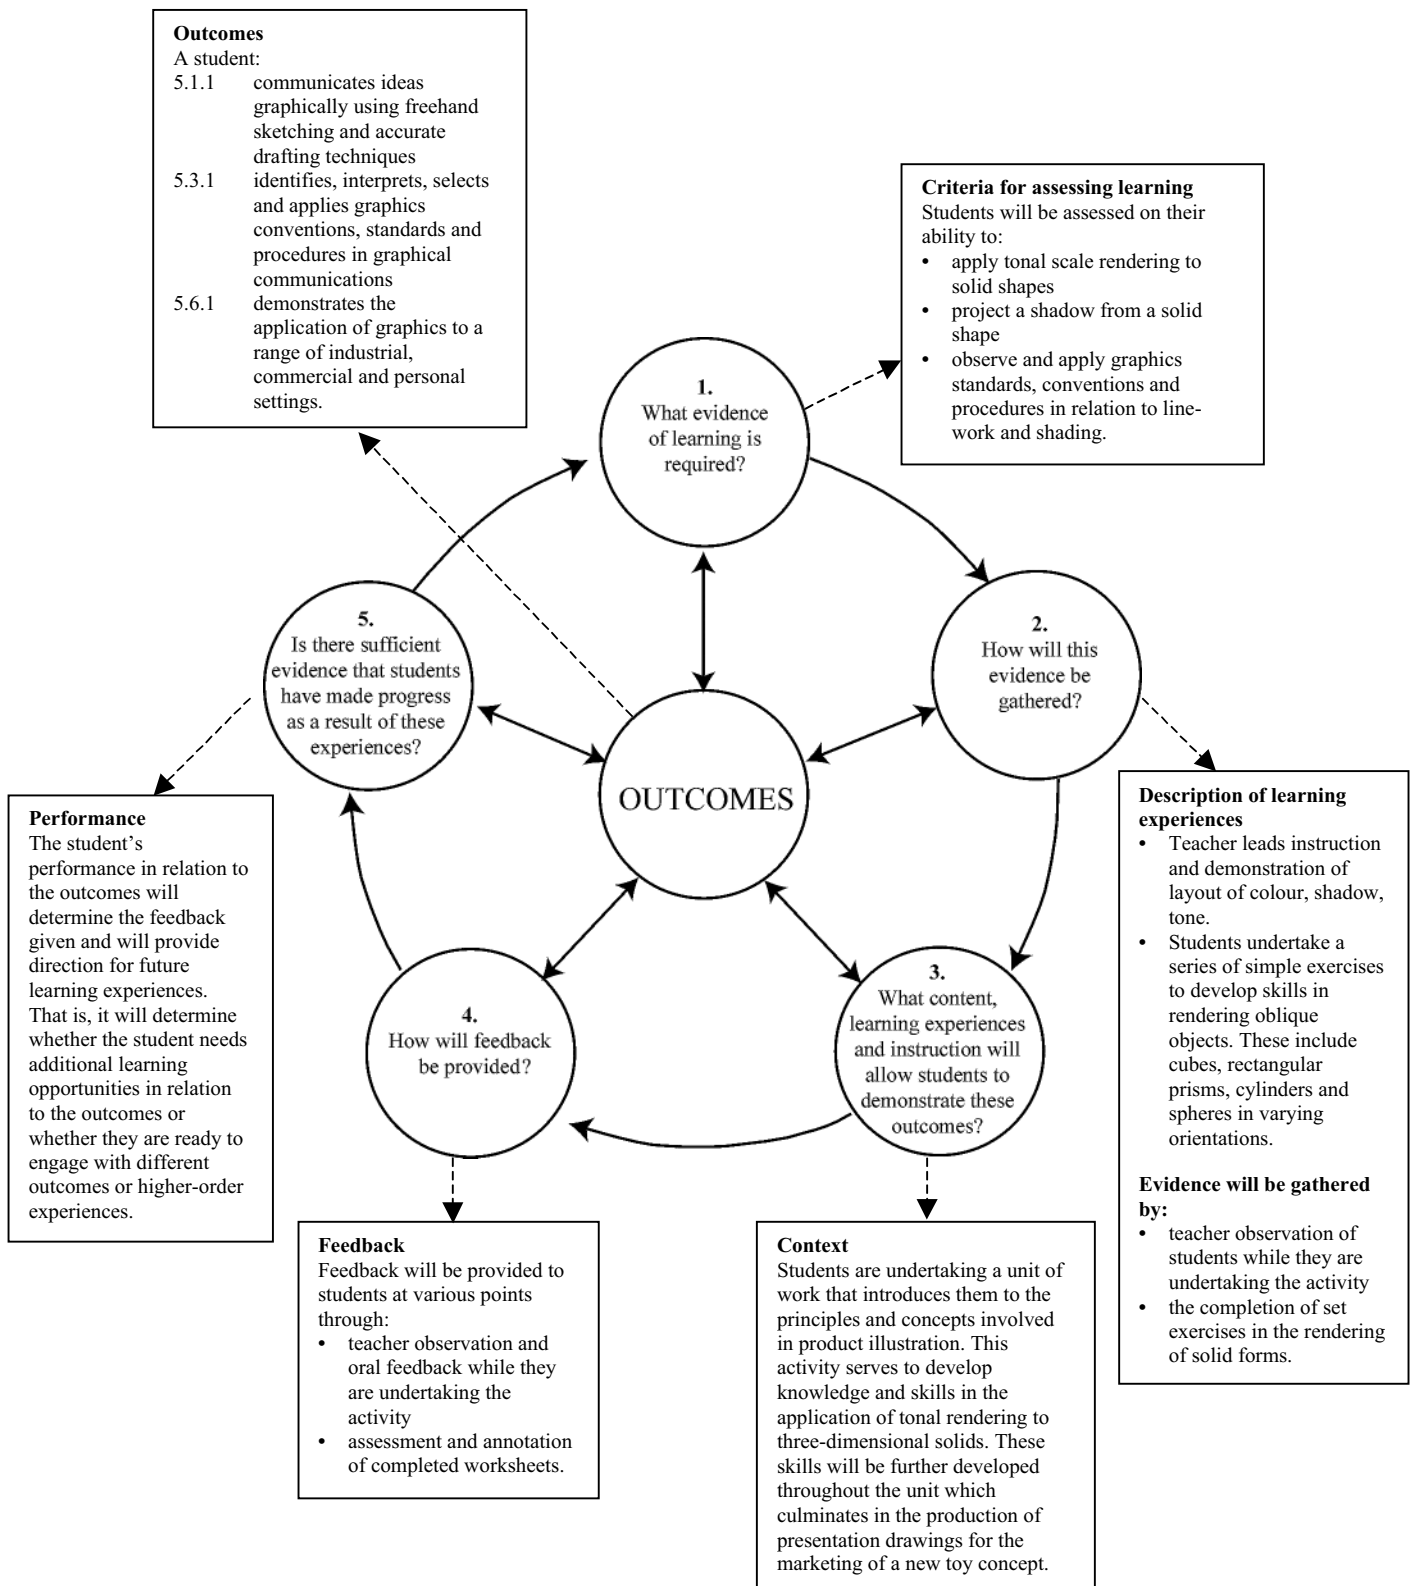

Details on how these principles translate in practice can be found on page 61 of the *Graphics Technology Years 7–10 Syllabus*. One activity in this document has been annotated to show how the principles of *assessment for learning* feature in that activity. It can be found on pages 16–17.

3.2 Planning for Effective Learning and Assessment

The diagram below summarises a model for integrating learning and assessment. It emphasises that outcomes are central to the decisions teachers make about the learning to be undertaken and the evidence of learning that needs to be collected. This evidence enables teachers to determine how well students are achieving in relation to the outcomes and to provide students with feedback on their learning. Evidence of learning assists teachers and students to decide if students are ready for the next phase of learning or if teachers need to adapt programs to provide further learning experiences to consolidate students' knowledge, understanding and skills.

The diagram below shows how this process has been applied in the design of the sample assessment for learning activity Elementary Rendering (pages 29–30).

3.3 Designing Effective Learning and Assessment

Designing effective learning experiences requires the selection of activities that develop students' knowledge, understanding and skills and that allow evidence of learning to be gathered. Methods of gathering evidence could include informal teacher observation, questioning, peer evaluation and self-evaluation, as well as more structured assessment activities. Assessment should be an integral part of each unit of work and should support student learning.

When designing assessment activities, teachers should consider whether the activity:

- has explicitly stated purposes that address the outcomes
- is integral to the teaching and learning program
- shows a clear relationship between the outcomes and content being assessed
- allows students to demonstrate the extent of their knowledge, understanding and skills
- focuses on what was taught in class and what students were informed would be assessed
- provides opportunities to gather information about what further teaching and learning is required for students to succeed
- provides valid and reliable evidence of student learning and is fair.

3.4 Annotated Assessment for Learning Activity

The *Assessment for Learning Principles* provide the criteria for judging the quality of assessment materials and practices. The Stage 5 sample assessment for learning activity Elementary Rendering has been annotated to show these principles.

The criteria used to annotate this activity are provided on page 16 and may be a useful tool in staff development activities.

Sample assessment for learning activity: Elementary Rendering

Context

Students are undertaking a unit of work to introduce them to the principles and concepts of product illustration. Prior to this they have undertaken preliminary work developing knowledge and skills in pictorial drawing with an emphasis on oblique projection. This activity is placed at the beginning of the unit and introduces students to elementary rendering concepts and techniques, in particular the use of tonal scales and shadow.

Outcomes

A student:

- 5.1.1 communicates ideas graphically using freehand sketching and accurate drafting techniques
- 5.3.1 identifies, interprets, selects and applies graphics conventions, standards and procedures in graphical communications
- 5.6.1 demonstrates the application of graphics to a range of industrial, commercial and personal settings.

AP1 – The context of the activity shows how it forms part of the learning and how it links to learning goals.
AP3 – The activity models an approach that has the activity as an integral component of the learning.

AP1 – The activity lists the outcomes to be addressed.

Description of activity

Using the worksheet supplied, students lead render oblique blocks in varying orientations. Consideration is given to the positioning of the light source and tonal scales of individual faces. They also project and render the shadow cast by the block.

Criteria for assessing learning

(These criteria would normally be communicated to students)

Students will be assessed on their ability to:

- apply tonal scale rendering to solid shapes
- project a shadow from a solid shape
- observe and apply graphics standards, conventions and procedures in relation to line-work and shading.

AP1 – The activity has a clear statement of purpose.
AP2 – The activity shows the knowledge, skills and understanding to be developed.
AP3 – The activity has been designed to target skills and understandings that lead to deeper learning as well as knowledge.
AP6 – The task allows for a range of student responses and is inclusive of all learners.

Guidelines for marking

The following guidelines for marking show one approach to assigning a value to a student's work. Other approaches may be used that better suit the reporting process of the school. Categories, marks, grades, visual representations or individual comments/notations may all be useful.

Range	A student in this range:
8–10 (High)	<ul style="list-style-type: none"> • applies tonal scales to surfaces consistent with light source • accurately projects shadows • demonstrates a high degree of line-work, shading and presentation
5–7 (Satisfactory)	<ul style="list-style-type: none"> • applies tonal scales to surfaces • projects a shadow consistent with light source • line-work, shading and presentation completed to a satisfactory standard
1–4 (Progressing)	<ul style="list-style-type: none"> • applies shading to some surfaces, not necessarily consistent with light source • projects a shadow inconsistent with light source • line-work, shading and presentation require further development.

AP1 – The activity is appropriate for the outcomes being assessed.
AP2 – The link between the marking guidelines and the criteria for judging performance and the outcomes is clear and explicit.
AP4 – Marking guidelines and criteria for judging performance reflect the nature and intention of the activity.

Feedback

While undertaking this activity, students will be provided with regular and ongoing feedback. This may include individual instruction and demonstration of specific techniques. Completed worksheets will be assessed by the teacher. Written annotations will inform students on areas of success and areas for improvement. Comments will inform them about such things as:

- the application of tonal scales to individual surfaces
- the recognition of light source
- overall presentation.

AP3 – The activity reflects a view of learning in which assessment helps students learn better.
AP5 – The activity is designed to help students take responsibility for their own learning.

Students will be encouraged to reflect on the feedback provided on this activity before undertaking subsequent rendering activities.

Future directions

This activity develops knowledge and skills which will be further developed and applied throughout the unit, culminating in the development of presentation drawings of a pull-along toy. Evidence collected through this activity could serve to inform teachers about the students' readiness to move on to more complex tasks or could identify the need for supplementary activities to provide students with opportunities for the mastery of skills.

Assessment of the final presentation drawings will incorporate the assessment of rendering techniques and skills.

AP1 – The activity links to further learning.
AP4 – The activity provides ways for students to use feedback from assessment.

This activity is presented without annotations on pages 29–30.

Assessment for learning principles

The following table shows some of the criteria that have been used to annotate the assessment for learning activity in this document. This list of criteria is not exhaustive; it has been included to provide support in understanding the *assessment for learning* principles.

It is not envisaged that teachers will use this table as a checklist each time an assessment activity is developed. However, this could be a valuable tool for use in staff development activities.

Assessment principle 1	Related criteria
<i>The activity emphasises the interactions between learning and manageable assessment strategies that promote learning.</i>	<ul style="list-style-type: none"> • The activity has a clear statement of purpose. • The activity lists the outcome(s) to be addressed. • The activity is appropriate for the outcomes being assessed. • The activity forms part of the learning and has clear links to learning goals. • The activity shows the knowledge, skills and understanding that are being built on.
Assessment principle 2	Related criteria
<i>The activity clearly expresses for the student and teacher the goals of the learning activity.</i>	<ul style="list-style-type: none"> • The link between the guidelines for marking and/or criteria for judging performance and the outcomes is clear and explicit. • The language of the marking guidelines and/or criteria for judging performance and the outcomes is clear and explicit. • The activity clearly indicates the knowledge, skills and/or understanding to be developed.
Assessment principle 3	Related criteria
<i>The activity reflects a view of learning in which assessment helps students learn better, rather than just achieve a better mark.</i>	<ul style="list-style-type: none"> • The activity has the capacity to engage the learner. • The activity has been designed to target skills and understandings that lead to deeper learning as well as knowledge. • The activity models an approach that has the activity as an integral component of the learning.
Assessment principle 4	Related criteria
<i>The activity provides ways for students to use feedback from assessment.</i>	<ul style="list-style-type: none"> • Marking guidelines and/or criteria for judging performance reflect the nature and intention of the activity and will be expressed in terms of the knowledge and skills demanded by the activity. • Marking guidelines and/or criteria for judging performance enable meaningful and useful information on performance, relative to the outcomes, to be gathered and reported.
Assessment principle 5	Related criteria
<i>The activity is designed to help students take responsibility for their own learning.</i>	<ul style="list-style-type: none"> • The activity models ways that self and peer assessment can be used as valid means of assessment.
Assessment principle 6	Related criteria
<i>The activity has been designed to be inclusive of all learners.</i>	<ul style="list-style-type: none"> • The activity is inclusive of gender, ethnicity, and a variety of socio-economic and geographical groupings.

3.5 Sharing Learning and Assessment Intentions

Students must be aware of what they need to do to demonstrate evidence of learning. This information could be conveyed informally or formally by the teacher, as appropriate for the learning activity. Students should be informed of the criteria that will be used to assess their learning. They should be clear about the meaning of the language used, and the subject-specific terminology. They also need to be clear about any sources or stimulus material that are appropriate to the activity.

It may be helpful to give students models of good responses and templates, or procedures to help them demonstrate the extent of their knowledge, understanding and skills.

3.6 Effective Feedback to Students

The aim of feedback is to communicate to students how well their knowledge, understanding and skills are developing in relation to the outcomes. Feedback enables students to recognise their strengths and areas for development, and to plan with their teacher the next steps in their learning. They are then given opportunities to improve and further develop their knowledge, understanding and skills.

Teacher feedback about student work is essential for students and is integral to the teaching and learning process. Student self-reflection and peer evaluation can also provide valuable feedback to students. Students should be provided with regular opportunities to reflect on their learning.

Feedback should:

- focus on the activity and what was expected
- be constructive, providing meaningful information to students about their learning
- correct misunderstandings
- identify and reinforce students' strengths and state clearly how students can improve.

Forms of feedback include:

- oral discussion with class, groups or individual students
- written annotations
- general comments to the class about those aspects of the activity in which students excelled and those aspects that still need addressing
- examples of good responses
- peer evaluation and self-evaluation.

3.7 Recording Evidence for Assessment

Recording student performance needs to be manageable. Teachers should make decisions about which aspects of student performance on an activity should be recorded, and in what format. The teacher can use this information to ascertain students' progress, what needs to be taught next and to what level of detail, and to form a judgement of student achievement at key points.

Record-keeping should reflect the reporting processes of the school and may take the form of individual comments or notations, marks, grades or visual representations for the activities.

A scale such as the one below may be a useful way to summarise the extent of students' learning. This example shows how individual students performed on the same assessment activity.

Student	Activity – Elementary Rendering		
A	x		
B	x		
C	x		
D	x		
E	x		
F	x		
	Progressing	Satisfactory	High

This method can be adapted to capture evidence of an individual student's strengths and weaknesses on various elements of one activity, or the performance of a particular student, class, group or cohort of students, across a range of assessment activities.

4 Programming Units of Work

The sample units of work have been developed using the following process:

- 1 identify the outcomes that will be addressed in the unit
- 2 decide on the focus of the unit of work
- 3 decide on the evidence of learning that will be required, how students will demonstrate learning in relation to the outcomes and how this evidence will be gathered and recorded
- 4 select the relevant syllabus content for the identified outcomes relating to the knowledge, understanding and skills that students will develop
- 5 plan the learning experiences and instruction, and identify the *assessment for learning* strategies that will provide the evidence of learning, checking that:
 - a range of assessment strategies is used
 - meaningful feedback in a variety of forms can be given to students
 - opportunities are provided to reflect on student progress and modify future learning experiences accordingly.

4.1 Sample Unit Proformas

Teachers can design a unit proforma that best meets their specific needs and circumstances. The sample unit proforma provided below has been annotated to highlight specific characteristics of each section.

Focus area:		Allocate time to deal with the content in appropriate depth and provide an increase in sophistication and challenge over the course.
Unit title:		
Unit description:	Provide an overview of the unit of work.	Unit duration: Targeted outcomes:
		Identify outcomes to be targeted in the unit. Ensure they are manageable in number. Teachers may choose to place particular emphasis on specific outcomes in individual units of work.
Resources:		
Identify the resources useful for the delivery of the unit of work.		

Students learn about:	Students learn to:	Integrated learning experiences, instruction and assessment	Evidence of learning	Feedback
Identify from the syllabus appropriate content related to the selected outcomes. Ensure it is manageable in the time allocated.		Describe learning experiences, instruction and assessment best suited to the syllabus content and that allows students to provide the required evidence of learning in relation to the outcomes. Ensure that a range of practical experiences occupies the majority of class time.	Decide on the observable evidence resulting from the activity that will allow judgments to be made on achievement in relation to outcomes.	Identify the nature and type of feedback and how it contributes to the student's learning.

5 Sample Units of Work

The sample units of work that follow are designed to assist teachers in planning for the implementation of the *Graphics Technology Years 7–10 Syllabus*. The units provide programming ideas for selected syllabus content.

The sample units show ways in which teachers can meet the needs, interests and abilities of their students, while assessing their progress towards a demonstration of outcomes. The sample units also illustrate ways in which assessment activities may be integrated into the teaching and learning sequence. They will assist teachers to understand the importance of:

- being explicit about the outcomes and content they are addressing
- being explicit about the evidence required to demonstrate student learning
- providing meaningful feedback to students
- adapting teaching and learning programs to students' demonstrated needs
- having a sound basis for modifying future teaching and learning programs (in light of students' demonstrated needs).

The sample units provide opportunities for students to engage in questioning and dialogue, self-assessment, peer assessment and reflection. Through these activities students can become clear about their own learning, understanding and needs.

Note that the assessment activities are described here in some detail to illustrate the process of *assessment for learning*. Teachers would not provide this level of detail in day-to-day classroom situations.

5.1 Stage 5 Sample Unit of Work: Core Module 1 – Children’s Toys

Unit 3: Children’s Toys	Unit duration: 7 weeks
<p>Unit description:</p> <p>This seven-week unit is placed at the end of core module 1. It introduces students to colour rendering techniques as well as 3D manipulation of basic solids on paper and in digital form. Shadow, tone and connectivity of solids are paramount in the learning activities. Prior to this unit students have spent time developing basic pictorial drawing skills. They have had an introduction to oblique drawing, and have had opportunities to practise and develop skills in this type of drawing. The unit incorporates skill development activities and provides opportunities for students to experiment with and practice rendering techniques.</p> <p>The unit culminates in the production of a folio presentation to market a concept for a pull-along toy to a prospective manufacturer. The folio will incorporate a series of oblique drawings and may be presented either on paper or in a digital format.</p>	<p>Targeted outcomes A student:</p> <ul style="list-style-type: none"> 5.1.1 communicates ideas graphically using freehand sketching and accurate drafting techniques 5.2.1 designs and produces a range of graphical presentations 5.2.2 evaluates the effectiveness of different modes of graphical communications for a variety of purposes 5.3.1 identifies, interprets, selects and applies graphics conventions, standards and procedures in graphical communications 5.3.2 manages the development of graphical presentations to meet project briefs and specifications 5.4.1 manipulates and produces images using computer-based drafting and presentation technologies 5.5.2 demonstrates responsible and safe work practices for self and others 5.6.1 demonstrates the application of graphics to a range of industrial, commercial and personal settings
<p>Resources: Drawing boards, OHP, coloured pencils, coloured Pantone (Yoken) markers optional, drawing instruments, CAD program 3D capability; Kemnitzer, Ronald B, 1983, <i>Rendering with Markers</i>, Watson-Guptill Publications, New York.</p>

5.1.1 Sample assessment for learning activity: Elementary Rendering

Context

Students are undertaking a unit of work to introduce them to the principles and concepts of product illustration. Prior to this they have undertaken preliminary work developing knowledge and skills in pictorial drawing with an emphasis on oblique projection. This activity is placed at the beginning of the unit and introduces students to elementary rendering concepts and techniques, in particular the use of tonal scales and shadow.

Outcomes

A student:

- 5.1.1 communicates ideas graphically using freehand sketching and accurate drafting techniques
- 5.3.1 identifies, interprets, selects and applies graphics conventions, standards and procedures in graphical communications
- 5.6.1 demonstrates the application of graphics to a range of industrial, commercial and personal settings.

Description of activity

Using the worksheet supplied, students learn to render oblique blocks in varying orientations. Consideration is given to the positioning of the light source and tonal scales of individual faces. They also project and render the shadow cast by the block.

Criteria for assessing learning

(These criteria would normally be communicated to students with the activity.)

Students will be assessed on their ability to:

- apply tonal scale rendering to solid shapes
- project a shadow from a solid shape
- observe and apply graphics standards, conventions and procedures in relation to line-work and shading.

Guidelines for marking

The following guidelines for marking show one approach to assigning a value to a student's work. Other approaches may be used that better suit the reporting process of the school. Categories, marks, grades, visual representations or individual comments/notations may all be useful.

Range	A student in this range:
8–10 (High)	<ul style="list-style-type: none">• applies tonal scales to surfaces consistent with light source• accurately projects shadow• demonstrates a high degree of accuracy in line-work, shading and presentation
5–7 (Satisfactory)	<ul style="list-style-type: none">• applies tonal scales to some surfaces with a recognition of light source• projects a shadow consistent with light source• line-work, shading and presentation completed to a satisfactory standard
1–4 (Progressing)	<ul style="list-style-type: none">• applies shading to some surfaces, not necessarily consistent with light source• projects a shadow inconsistent with light source• line-work, shading and presentation require further development.

Feedback

While undertaking this activity, students will be provided with regular and ongoing feedback. This may include individual instruction and demonstration of specific techniques. Completed worksheets will be assessed by the teacher. Written annotations will inform students on areas of success and areas for improvement. Comments will inform them about such things as:

- the application of tonal scales to individual surfaces
- the recognition of light source
- overall presentation.

Students will be encouraged to reflect on the feedback provided on this activity before undertaking subsequent rendering activities.

Future directions

This activity develops knowledge and skills which will be further developed and applied throughout the unit, culminating in the development of presentation drawings of a pull-along toy. Evidence collected through this activity could serve to inform teachers about the students' readiness to move on to more complex tasks or could identify the need for supplementary activities to provide students with opportunities for the mastery of skills.

Assessment of the final presentation drawings will incorporate the assessment of rendering techniques and skills.

5.2 Stage 5 Sample Unit of Work: Core Module 2 – Household Appliances

Unit 4: Household Appliances	Unit duration: 7 weeks
<p>Unit description:</p> <p>This unit is placed at the beginning of core module 2. It introduces students to the concepts of orthogonal drawing while consolidating knowledge of, and skills in, pictorial drawing and rendering developed in previous units. Students also deepen their knowledge and understanding of drafting standards (AS 1100) through the introduction of dimensioning standards and techniques. Throughout the unit students gain knowledge and experience in the use of both manual and computer-based drafting technologies.</p> <p>The unit culminates in the production of a graphical presentation based on a common household appliance (eg toaster).</p>	<p>Targeted outcomes</p> <p>A student:</p> <ul style="list-style-type: none"> 5.1.1 communicates ideas graphically using freehand sketching and accurate drafting techniques 5.2.1 designs and produces a range of graphical presentations 5.3.1 identifies, interprets, selects and applies graphics conventions, standards and procedures in graphical communications 54.1 manipulates and produces images using computer-based drafting and presentation technologies 5.6.1 demonstrates the application of graphics to a range of industrial, commercial and personal settings

Students design and produce a Powerpoint presentation based on research into appliances and incorporating sketches/drawings of their own design concept. <i>(Sample assessment for learning activity, page 36)</i> 	<ul style="list-style-type: none"> Students are able to design and produce an informative multimedia presentation. 	<ul style="list-style-type: none"> peer and teacher assessment of individual presentations with oral and written feedback

5.2.1 Sample assessment for learning activity: Multimedia Presentation

Context

Students are undertaking the second module of the Graphics Technology course. Having previously completed module 1 the students have prior knowledge of orthogonal and pictorial drawing.

The current unit of work follows the theme of household appliances, with a focus on toasters. Students have just completed research into the history, operation and materials used in the design and manufacture of toasters. This activity will allow further development of sketching skills and reinforce the principles of isometric drawing.

The activity occurs in the early part of the unit. Approximately 4×40 minute periods have been assigned to complete the activity, with a further 2×40 minute periods for student presentations.

Outcomes

A student:

- 5.1.2 analyses the nature of information and intended audience to select and develop appropriate presentations
- 5.2.1 designs and produces a range of graphical presentations
- 5.4.2 designs, produces and evaluates multimedia presentations.

Description of activity

Students design and produce a Powerpoint presentation that outlines the operation of a toaster and the materials commonly used in the manufacture of toasters. The presentation also needs to incorporate concept sketches for the design of a new toaster. Students present the completed work to the class.

Criteria for assessing learning

(These criteria would normally be communicated to students with the activity.)

Students will be assessed on their ability to:

- design and produce a multimedia presentation for a specific audience
- select and present accurate information in a clear and concise manner
- produce quality freehand concept sketches.

Guidelines for marking

The following guidelines for marking show one approach to assigning a value to a student's work. Other approaches may be used that better suit the reporting process of the school. Categories, marks, grades, visual representations or individual comments/notations may all be useful.

Range	A student in this range:
11–15 (High)	<ul style="list-style-type: none">• displays high technical skill in the design and production of multimedia presentations• selects and presents information in a clear and concise manner reflecting a consideration of the audience• produces high quality detailed freehand sketches and successfully integrates these into the overall presentation
6–10 (Satisfactory)	<ul style="list-style-type: none">• displays competence in the selection and use of the elementary features of a multimedia application in the design and production of the presentation• presents information with some consideration of audience• produces clear and accurate freehand sketches which are incorporated into the final presentation
1–5 (Progressing)	<ul style="list-style-type: none">• displays limited technical skill in producing a simple multimedia presentation• collects and presents information related to the topic• displays limited skill in the production of freehand sketches.

Feedback

While undertaking this activity students will receive regular feedback. This may include individual instruction or demonstration of specific techniques and processes that will inform the development and production of the presentation.

The completed presentation will be assessed through peer and teacher evaluation with feedback provided orally and through written annotations. Teacher comments will inform students about such things as their selection and presentation of content, presentation sequencing, and timing and freehand sketching technique.

Future directions

This activity links to future learning within the unit of work where students will produce a range of presentations based on the toaster. The development of skills in multimedia presentation techniques serves as preparation for work to be undertaken later in the course involving the design and development of individual graphical presentations. The knowledge of materials gained through this activity will be further developed in the Engineering Drawing option module to be undertaken in Year 10.

5.3 Stage 5 Sample Unit of Work: Option Module – Engineering Drawing

A Thematic Approach – Clamping Devices	Unit duration: 10 weeks
<p>Unit description:</p> <p>This unit is placed in the second 100 hours of a 200-hour course. The theme for the unit is Clamping Devices. Through this unit students are introduced to concepts related to:</p> <ul style="list-style-type: none"> • planning and sketching drawing layouts • representation of engineering elements • detail drawings • assembly drawings. <p>This unit consolidates and extends knowledge and understanding of, and skills in, graphics technology with a particular emphasis on the standards and presentation methods used in engineering. The unit incorporates skill development activities related to the production of detail and assembly drawings.</p>	<p>Targeted outcomes</p> <p>A student:</p> <ul style="list-style-type: none"> 5.1.1 communicates ideas graphically using freehand sketching and accurate drafting techniques 5.2.1 designs and produces a range of graphical presentations 5.3.1 identifies, interprets, selects and applies graphics conventions, standards and procedures in graphical communications 5.3.2 manages the development of graphical presentations to meet project briefs and specifications 5.4.1 manipulates and produces images using computer-based drafting and presentation technologies 5.5.1 identifies, assesses and manages relevant OHS factors to minimise risks in the work environment 5.5.2 demonstrates responsible and safe work practices for self and others 5.6.1 demonstrates the application of graphics to a range of industrial, commercial and personal settings

5.3.1 Sample assessment for learning activity: Item and Assembly Drawings

Context

Students are undertaking the study of the Engineering Drawing option module. This activity, which takes place midway through the unit, has a focus on holding and clamping devices commonly found in school workshops. Students have had prior instruction and experience in the development and production of detail and assembly drawings including the representation of common engineering elements such as screw threads.

Outcomes

A student:

- 5.1.1 communicates ideas graphically using freehand sketching and accurate drafting techniques
- 5.2.1 designs and produces a range of graphical presentations
- 5.3.1 identifies, interprets, selects and applies graphics conventions, standards and procedures in graphical communications
- 5.6.1 demonstrates the application of graphics to a range of industrial, commercial and personal settings.

Description of activity

Working from a supplied exploded pictorial view of a vee block and clamp, students produce detailed item drawings of each individual component and an itemised assembly drawing incorporating a fully sectioned front view.

Criteria for assessing learning

(These criteria would normally be communicated to students with the activity.)

Students will be assessed on their ability to:

- produce engineering drawings from a pictorial view
- apply engineering drawing standards related to:
 - general drafting procedures; line-work, page layout, etc
 - dimensioning
 - representation of engineering features and elements: threads, knurls
 - sectional views
 - itemisation and parts lists.

Guidelines for marking

The following guidelines for marking show one approach to assigning a value to a student's work. Other approaches may be used that better suit the reporting process of the school. Categories, marks, grades, visual representations or individual comments/notations may all be useful.

Range	A student in this range:
11–15 (High)	<ul style="list-style-type: none">• produces detailed and accurate representation of individual components and assembly• demonstrates correct application of engineering drawing standards
6–10 (Satisfactory)	<ul style="list-style-type: none">• demonstrates correct representation of individual components and assembly• represents some engineering features and elements using engineering standards• completes drawings with some accuracy and detail
1–5 (Progressing)	<ul style="list-style-type: none">• represents individual components and assembly to give overall description with some inaccuracies• inconsistently applies engineering drawing standards• completes sketches and/or drawings with limited accuracy.

Feedback

While undertaking this activity students will receive regular feedback, including demonstration of specific techniques and explanation of concepts. Final assessment of the drawings will incorporate written annotations. Comments will inform them about such things as their application of engineering drawing standards, interpretation and representation of principal and sectional views and overall presentation standards.

Future directions

This activity provides the opportunity to develop knowledge and skills that will be built on and enhanced through subsequent activities within the unit of work, including the development and production of more complex engineering drawings.
