## 1 Introduction

This support document has been designed to help teachers understand key aspects of the new *Textiles Technology Years 7–10 Syllabus* and to provide guidance for implementation. The document shows how these aspects can be incorporated in teaching and learning programs, and how these programs are underpinned by the principles of *assessment for learning* (*Textiles Technology Years 7–10 Syllabus*, p 42).

The document provides advice about constructing a program that will cover the scope of Textiles Technology for a stage. It sets out a process for planning and sequencing units of work, and developing teaching and learning activities.

The sample stage program plans and the sample units of work in this document demonstrate ways in which teachers can build a teaching and learning program and develop units of work to ensure coverage of the scope of the syllabus.

The document contains two Stage 5 sample units of work:

- *Time for Bed*. This unit occurs early in the Stage 5 Textiles Technology course. In this unit students deconstruct various items of sleepwear and consider how functional properties and aesthetic aspects relate to the end use of a textiles item. Students design, produce and evaluate embellished hand-felted slippers and pyjamas using a commercial pattern.
- *The World is a Stage*. This unit occurs midway through the Stage 5 Textiles Technology course. In this unit students explore the work of theatrical designers investigating how historical, cultural and contemporary sources of inspiration influence the designer's work. Students design, produce and evaluate a theatrical costume or accessory.

These sample units can be used as models for planning units of work. They include:

- relevant outcomes and content
- assessment activities that have been designed and integrated into the units of work
- different types of possible feedback
- a variety of teaching and learning experiences
- opportunities for student reflection.

An assessment activity from each unit has been selected to show how assessment can fit into teaching and learning sequences. They are described in some detail to illustrate the process of *assessment for learning*. Teachers would not provide this level of detail in day-to-day classroom situations. The units of work and activities may be modified or amended to suit the needs, interests and abilities of students.

For a small percentage of students with special education needs who are undertaking Life Skills outcomes and content, support materials will be provided which will assist in the development of a meaningful and relevant program of study related to the *Textiles Technology Years 7–10 Syllabus*. Units of work adapted for students undertaking Textiles Technology Life Skills will be included in a consolidated document that will be distributed to schools early in 2004.

## **2 Establishing a Scope and Sequence Plan**

A scope and sequence plan provides an overview of the units of work to be taught and details the placement, sequence and duration of units. When establishing a scope and sequence plan for Textiles Technology a number of factors should be considered.

### **Syllabus requirements**

- All outcomes are to be addressed by the end of a course.
- Students undertaking the 100-hour course are required to:
  - complete a minimum of two units of work developed from different focus areas
  - complete all content from project work and content from areas of study appropriate to the project and focus area selected
  - study a minimum of one textiles designer.
- Students undertaking the 200-hour course are required to:
  - complete a minimum of four units of work covering a minimum of three focus areas
  - complete all content in each area of study and project work
  - study a minimum of two textiles designers.

### **Project work**

There are two components of project work: the development of practical skills and documentation of work. Project work forms the basis of every unit of work and students will complete a textile item in each unit. Project work develops skills in designing, producing and evaluating.

Documentation is used as a tool for student learning, providing the student with a means of recording all aspects of the design process used. The documentation will provide evidence of student investigation and research, sources of inspiration and generation of ideas, experimental work undertaken and the development of creative design skills, collection of resources and the production and evaluation of project work. Students may document project work in a variety of ways. These may include the use of a digital portfolio, design folio, diary, journal, workbook or any other appropriate method.

### **Further considerations**

Teachers also need to consider:

- the specific needs, interests, previous experiences and abilities of students
- areas of community significance
- the most effective utilisation of existing and available resources
- the range of experiences and project work undertaken during the course to ensure an increase in challenge and sophistication
- the relevant guidelines and directives of their education authorities and/or schools so that teaching programs developed recognise and reflect relevant State and Commonwealth legislation, regulations and standards including Occupational Health and Safety, Chemical Safety in Schools and Animal Welfare guidelines. Teachers need to be aware of activities that may require notification, certification, permission, permits and licences.

## 2.1 Sample Stage 5 Scope and Sequence Plan

The sample scope and sequence provided is based on a Stage 5, 200-hour program.

In this sample scope and sequence plan shorter units of work have been designed at the beginning of Stage 5 to provide variety in focus areas, learning experiences and project work and to encourage enthusiasm and motivation. Longer units of work have been planned later in Stage 5 to allow for greater depth of study and the opportunity for students to engage in more challenging and sophisticated experiences and project work.

There are opportunities to address aspects of all syllabus outcomes in each unit of work. Alternatively, teachers may choose to place particular emphasis on specific outcomes in individual units of work. Regardless of the approach taken by individual teachers it is essential that all outcomes are addressed by the completion of the course.

Term	Year 9	Year 10
1	<b>Unit 9.1:</b> Inspired Bags <b>Focus Area:</b> Textiles Arts <b>Outcomes:</b> 5.1.2, 5.2.1, 5.2.2, 5.2.3, 5.4.1, 5.5.1, 5.5.2, 5.5.3, 5.6.1	<b>Unit 10.1:</b> The World is a Stage <b>Focus Area:</b> Costume <b>Outcomes:</b> 5.1.1, 5.1.2, 5.2.1, 5.2.2, 5.2.3, 5.3.1, 5.4.1, 5.5.1, 5.5.2, 5.5.3, 5.6.1
2	<b>Unit 9.2:</b> Time For Bed <b>Focus Area:</b> Apparel <b>Outcomes:</b> 5.1.1, 5.1.2, 5.2.3, 5.3.1, 5.4.1, 5.5.1, 5.5.2, 5.5.3, 5.6.1	
3	<b>Unit 9.3:</b> The Inside Story <b>Focus Area:</b> Furnishings <b>Outcomes:</b> 5.1.1, 5.1.2, 5.2.1, 5.2.2, 5.4.1, 5.5.1, 5.5.2, 5.5.3, 5.6.1	<b>Unit 10.2:</b> Fashion Forecasting <b>Focus Area:</b> Apparel <b>Outcomes:</b> 5.1.1, 5.1.2, 5.2.1, 5.2.2, 5.3.1, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.5.3, 5.6.1
4	<b>Unit 9.4:</b> The Great Outdoors <b>Focus Area:</b> Non-apparel <b>Outcomes:</b> 5.1.1, 5.1.2, 5.2.2, 5.3.2, 5.4.1, 5.5.1, 5.5.2, 5.5.3, 5.6.1	

The highlighted units are included in this document.

## 2.2 Stage 5 Unit Overviews

The following overviews relate to the units in the sample scope and sequence.

Project work must form the basis of every unit. The outcomes linked to project work (5.4.1, 5.5.1, 5.5.2, 5.5.3, 5.6.1) are listed in every unit of work.

By the end of a 100-hour and a 200-hour course, students should have been given opportunities to demonstrate achievement in relation to each of the course outcomes. However, some students may demonstrate achievement in relation to the outcomes quickly, while others may need additional time. Teachers will plan and adjust their teaching/learning programs to cater for these individual differences.

## Unit overviews

<p><b>Unit 9.1</b></p>	<p><b>Name:</b> Inspired Bags <b>Focus Area:</b> Textiles Arts</p>
<p><b>Unit Description</b></p>	<p>This unit of work focuses on Textiles Arts and explores the aesthetic aspects of textiles where visual impact is obtained by applying a range of colouration and decoration techniques in both traditional and innovative ways. This introductory unit aims to develop student skills and confidence when generating and applying design ideas. Students examine the work of a range of textiles artists and experiment with a wide variety of colouration and decoration techniques. <b>Project work involves students using inspiration from diverse sources, applying the creative process to develop and produce personalised bags.</b> Colouration and decoration techniques are incorporated in the bag design providing students with the opportunity to develop skills and confidence in the application of a range of techniques.</p>
<p><b>Unit 9.2</b></p>	<p><b>Name:</b> Time For Bed <b>Focus Area:</b> Apparel</p>
<p><b>Unit Description</b></p>	<p>Function and performance are important criteria in the design of textile items. In this unit students deconstruct various sleepwear items and consider how functional properties and aesthetic aspects relate to the end use of an item. Students identify component parts of each item, examine materials used in their manufacture and justify their use. Using Information and Communication Technologies (ICT) students investigate the historical development of sleepwear and how designers produce sleepwear as fashion statements in today’s market. <b>Project work involves the design and production of embellished hand-felted slippers and production of pyjamas using commercial patterns.</b></p>
<p><b>Unit 9.3</b></p>	<p><b>Name:</b> The Inside Story <b>Focus Area:</b> Furnishings</p>
<p><b>Unit Description</b></p>	<p>We are constantly altering our internal environments to better respond to our needs. In this unit students explore interior design and how it is an extension of personality and a statement about who we are. By examining the work of various interior designers, students can identify styles and a variety of approaches to interior design. Students experiment with the elements of design, using computer based software applications. CAD software allows students to investigate the use of colour, lighting, furnishings and accessories. <b>Project work involves students designing an interior space to respond to needs and reflect the personality of the user.</b> A furnishing item is produced as part of this unit.</p>
<p><b>Unit 9.4</b></p>	<p><b>Name:</b> The Great Outdoors <b>Focus Area:</b> Non-apparel</p>
<p><b>Unit Description</b></p>	<p>Outdoors is an important lifestyle focus for many Australians. Activities such as camping, surfing and bush walking have numerous items of clothing, equipment and accessories specifically designed to meet the needs of outdoor activities. This unit of work examines the new and emerging textiles technologies associated with outdoor activities and related accessories and equipment. Students use ICT to investigate recent developments in clothing and textiles equipment and accessories associated with an outdoor leisure pursuit. Students consider the impact of production on the consumer and society. <b>Project work involves students designing a range of clothing and accessories associated with an outdoors leisure pursuit and producing an item of non-apparel from this range.</b></p>

## Unit overviews

<b>Unit 10.1</b>	<b>Name:</b> The World is a Stage <b>Focus Area:</b> Costume
<b>Unit Description</b>	Designing costume for theatre and film presents new challenges and endless creative possibilities. In this unit students examine the work of theatrical costume designers from a variety of films. By investigating how historical, cultural and contemporary sources of inspiration influence the designer students develop an understanding of the creative process. They engage in a mask-making activity to stimulate ideas for their project work. <b>Project work for this unit requires students to design, produce and evaluate a theatrical costume or accessory from an identified source of inspiration. Students will also document and justify the selection of materials, equipment and techniques.</b>
<b>Unit 10.2</b>	<b>Name:</b> Fashion Forecasting <b>Focus Area:</b> Student to negotiate focus area with teacher
<b>Unit Description</b>	From the mass market to specialised niche markets the fashion industry is highly competitive and demanding. There is a wide range of career opportunities from designing to retailing. This unit examines the nature and scope of the fashion and textiles industry and the factors affecting consumer demand, selection and use of textiles. Students will investigate and profile a textiles designer, document the creative process used by the designer and explain the factors affecting their work. <b>Project work involves students designing, producing and evaluating a textiles item inspired by the work of a focus textiles designer.</b> Students justify the selection of materials for a textiles item and identify labelling requirements, through the production of labels and a swing tag.

### 3 Advice on Assessment

#### 3.1 Assessment for Learning

The Board’s revised syllabuses advocate *assessment for learning*. Assessment that enhances learning recognises that learners use their current understanding to discover, develop and incorporate new knowledge, understanding and skills. *Assessment for learning* helps teachers and students to know if that current understanding is a suitable basis for future learning.

Assessment occurs as an integral part of teaching and learning. Teacher instruction and assessment influence student learning and learning processes. This involves using assessment activities to clarify student understanding of concepts, and planning ways to remedy misconceptions and promote deeper understanding.

*Assessment for learning* encourages self-assessment and peer assessment. Students can develop and use a range of strategies to actively monitor and evaluate their own learning and the learning strategies they use.

The feedback that students receive from completing assessment activities will help teachers and students decide whether they are ready for the next phase of learning or whether they need further learning experiences to consolidate their knowledge, understanding and skills. Teachers should consider the effect that assessment and feedback have on student motivation and self-esteem, and the importance of the active involvement of students in their own learning.

By integrating learning and assessment, the teacher can choose which aspects of a student’s performance to record. These records can be used to monitor the student’s progress, determine what to teach next and decide the level of detail to be covered. At key points, such as the end of the year, this information is also available for the teacher to use to form a judgment of the student’s performance against levels of achievement. This judgement can be used to inform parents, the next teacher, and especially the student, of the student’s progress. Consequently, teachers using their professional judgement in a standards-referenced framework are able to extend the process of *assessment for learning* into the assessment of learning.

#### Principles of assessment for learning

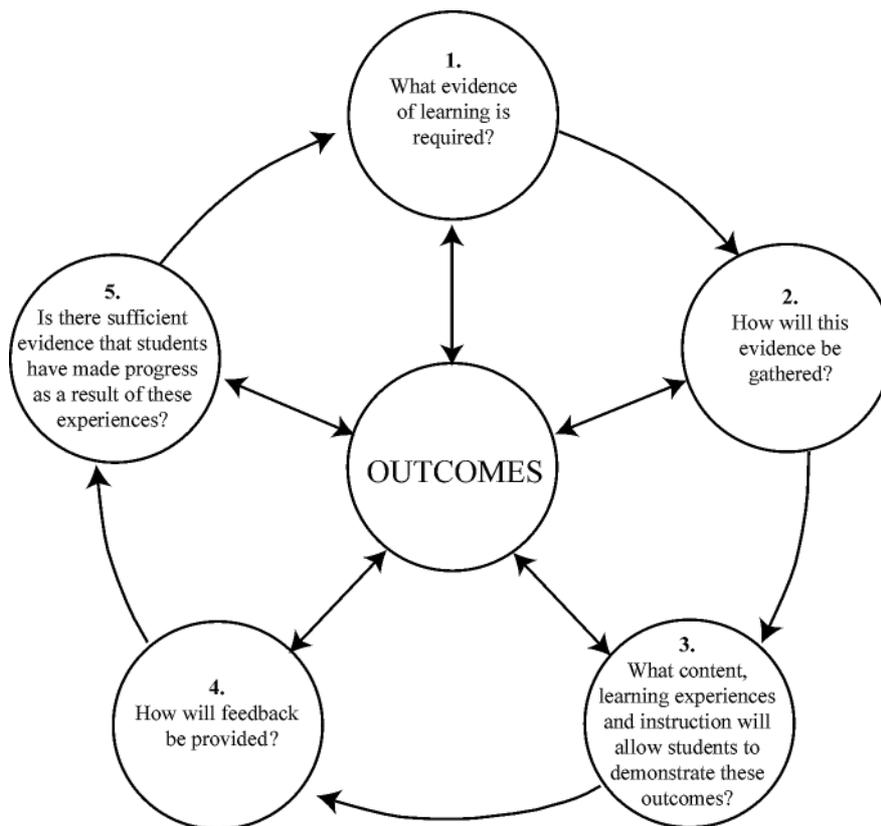

Assessment for learning:

- AP1 emphasises the interactions between learning and manageable assessment strategies that promote learning
- AP2 clearly expresses for the student and teacher the goals of the learning activity
- AP3 reflects a view of learning in which assessment helps students learn better, rather than just achieve a better mark
- AP4 provides ways for students to use feedback from assessment
- AP5 helps students take responsibility for their own learning
- AP6 is inclusive of all learners.

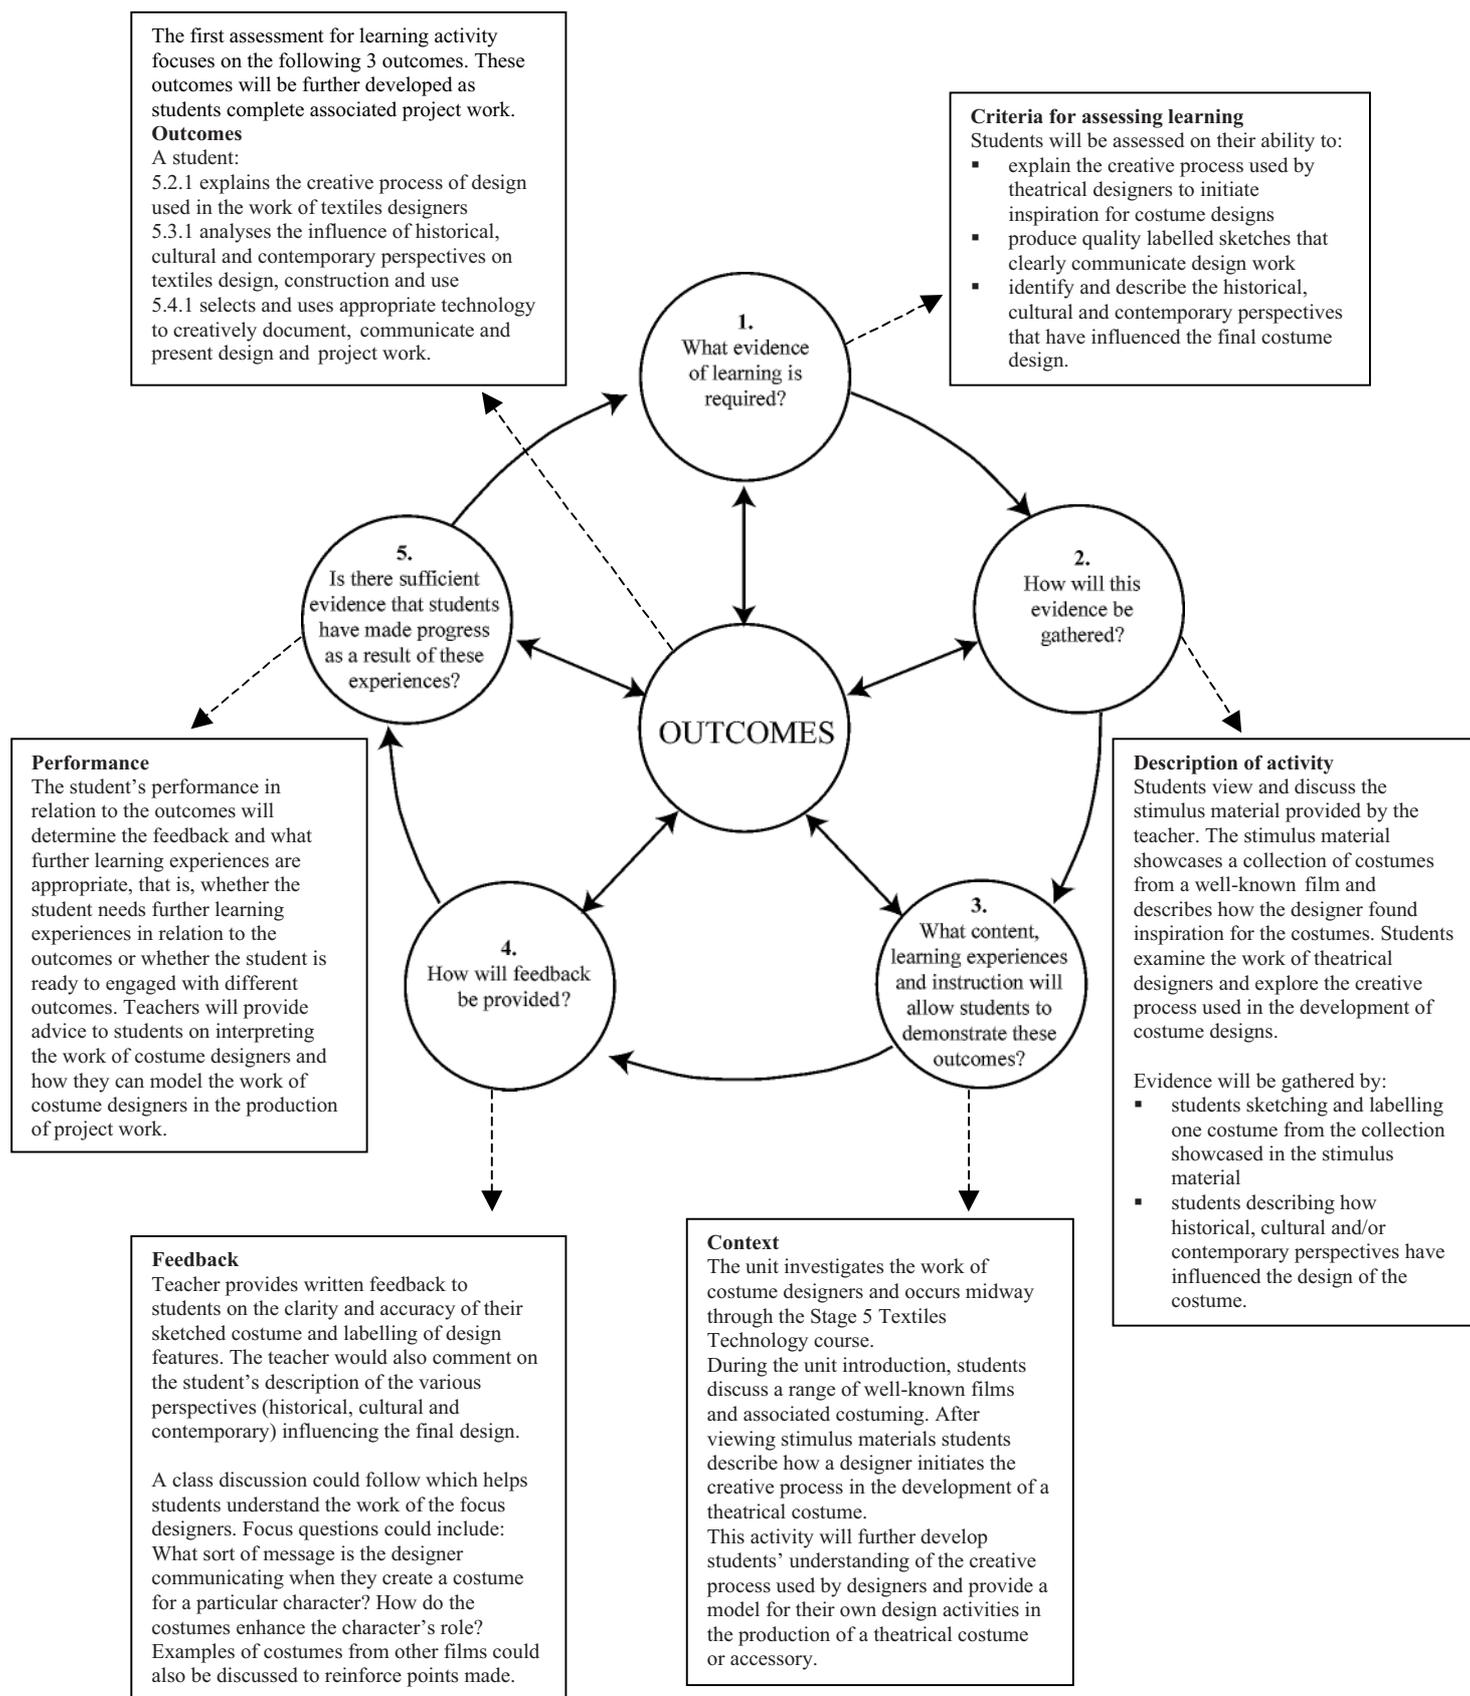

Details on how these principles translate in practice can be found on page 42 of the *Textiles Technology Years 7–10 Syllabus*. One activity in this document has been annotated to show how the principles of *assessment for learning* feature in that activity. It can be found on pp 14–15.

### 3.2 Planning for Effective Learning and Assessment

The diagram below summarises a model for integrating learning and assessment. It emphasises that outcomes are central to the decisions teachers make about the learning to be undertaken and the evidence of learning that needs to be collected. This evidence enables teachers to determine how well students are achieving in relation to the outcomes and to provide students with feedback on their learning. Evidence of learning assists teachers and students to decide if students are ready for the next phase of learning or if teachers need to adapt programs to provide further learning experiences to consolidate students' knowledge, understanding and skills.

The diagram on the following page shows how this process has been applied in the design of the unit ‘The World is a Stage’ and the integration of an assessment for learning activity, ‘Influences on Costume Design’ (pp 35–47).

### **3.3 Designing Effective Learning and Assessment**

Designing effective learning experiences requires the selection of activities that develop students' knowledge, understanding and skills and that allow evidence of learning to be gathered. Methods of gathering evidence could include informal teacher observation, questioning, peer evaluation and self-evaluation, as well as more structured assessment activities. Assessment should be an integral part of each unit of work and should support student learning.

When designing assessment activities, teachers should consider whether the activity:

- has explicitly stated purposes that address the outcomes
- is integral to the teaching and learning program
- shows a clear relationship between the outcomes and content being assessed
- allows students to demonstrate the extent of their knowledge, understanding and skills
- focuses on what was taught in class and what students were informed would be assessed
- provides opportunities to gather information about what further teaching and learning is required for students to succeed
- provides valid and reliable evidence of student learning and is fair.

### **3.4 Annotated Assessment for Learning Activity**

The *Assessment for Learning Principles* provide the criteria for judging the quality of assessment materials and practices. The Stage 5 sample assessment activity 'Influences on Costume Design' has been annotated to show these principles.

## Sample assessment activity: Influences on Costume Design

### Context

This activity is from the first Year 10 unit of work ‘The World is a Stage’ in Stage 5 Textiles Technology. In this unit students will examine the work of theatrical designers and explore the creative process used in the development of costume designs. Project work for this unit requires students to design, produce and evaluate a theatrical costume from an identified source of inspiration.

Prior to this activity students have discussed a range of costuming. After viewing stimulus materials students explore the creative process in the development of a theatrical costume and label design features from the collection. Students will describe how historical, cultural and contemporary perspectives influenced the design of the costume.

AP1 the activity forms part of the learning and has clear links to learning goals  
 AP1 the activity shows the knowledge, skills and understanding that are being built on  
 AP3 the activity models an approach that has the activity as an integral component of learning  
 AP6 the activity is inclusive of gender, ethnicity, and a variety of socio-economic and geographical groupings

### Outcomes

A student:

- 5.2.1 explains the creative process used in the work of textiles designers
- 5.3.1 analyses the influence of historical, cultural and contemporary perspectives on textiles design, construction and use
- 5.4.1 selects and uses appropriate technology to creatively document, communicate and present design and project work.

AP1 the activity lists the outcomes to be addressed

### Description of activity

Students view and discuss the stimulus material provided which showcases a collection of costumes from a well-known film. The film provides found inspiration for the costumes.

The assessment activity requires students to:

- sketch one costume and label the design features
- explain how the designer uses sources of inspiration and describe how historical, cultural and contemporary perspectives have influenced the design.

AP1 the activity has a clear statement of purpose  
 AP1 the activity is appropriate for the outcomes being assessed  
 AP3 the activity has the capacity to engage the learner

### Criteria for assessing learning

(These criteria would normally be communicated to students with the activity)  
 Students will be assessed on their ability to:

- explain the creative process used by theatrical designers to initiate inspiration for the costume designs
- produce quality labelled sketches that clearly communicate design work
- identify and describe the historical, cultural and contemporary perspectives that have influenced the final costume design.

AP2 the link between the marking guidelines and/or criteria for judging performance and the outcomes is clear and explicit

AP3 the activity has been designed to target skills and understanding that lead to deeper learning as well as knowledge

### Guidelines for marking

The following guidelines for marking show one approach to assigning a value to a student’s work. Other approaches may be used that better suit the reporting process of the school. Categories, marks, grades, visual representations or individual comments/notations may be useful.

Range	A student in this range:
8–10 (High)	<ul style="list-style-type: none"> <li>identifies sources of inspiration used by the designer</li> <li>produces appropriately labelled sketches with minimal labelling, and limited reference to design features as historical, cultural and contemporary</li> <li>explains historical, cultural and contemporary perspectives, which have influenced the final costume design</li> </ul>
4–7 (Satisfactory)	<ul style="list-style-type: none"> <li>identifies some sources of inspiration used by the designer</li> <li>produces simple sketches with minimal labelling, and limited reference to design features as historical, cultural and contemporary</li> <li>identifies some historical, cultural, and contemporary perspectives, which have influenced the final costume design.</li> </ul>
1–3 (Progressing)	<ul style="list-style-type: none"> <li>identifies sources of inspiration used by the designer</li> <li>produces appropriately labelled sketches with minimal labelling, and limited reference to design features as historical, cultural and contemporary</li> <li>explains historical, cultural and contemporary perspectives, which have influenced the final costume design</li> </ul>

AP2 the link between the marking guidelines and/or criteria for judging performance and outcomes is clear and explicit  
 AP2 the language of the marking guidelines and/or criteria for judging performance and the outcomes is clear and explicit  
 AP4 marking guidelines and/or criteria for judging performance reflect the nature and intention of the activity and will be expressed in terms of the knowledge and skills demanded by the activity  
 AP4 marking guidelines and/or criteria for judging performance enable meaningful and useful information on performance relative to the outcomes, to be gathered and reported

### Feedback

Written comments will inform students about such things as:

- their identification of sources of inspiration used by the designer
- the clarity and accuracy of their sketched and labelled costume, clothing and accessories
- their explanations of how various perspectives (historical, cultural and contemporary) have influenced the final design.

AP5 the activity models ways that self and peer-assessment can be used as a valid means of assessment

A class discussion could follow which helps students further understand the work of the focus designers. Focus questions might include: What sort of message is the designer communicating when they create a costume for a particular character? How do the costumes enhance the character’s role? Examples of costumes from other films could also be discussed to reinforce points made.

### Future directions

This activity helps students’ understanding of the role of costume designers in the production of project work. They recognise that designers create innovative costumes using historical, cultural and contemporary sources of inspiration. This knowledge can be further applied as students model the work of costume designers in the production of project work.

AP2 the activity clearly indicates the knowledge, skills and understanding that are being built on

### Assessment for Learning Principles

The following table shows some of the criteria that have been used to annotate the assessment for learning activity in this document. This list of criteria is not exhaustive; it has been included to provide support in understanding the Assessment for Learning Principles.

It is not envisaged that teachers will use this table as a checklist each time an assessment activity is developed. However, this could be a valuable tool for use in staff development activities.

Assessment principle 1	Related criteria
<b><i>The activity emphasises the interactions between learning and manageable assessment strategies that promote learning</i></b>	<ul style="list-style-type: none"> <li>• The activity has a clear statement of purpose</li> <li>• The activity lists the outcome(s) to be addressed</li> <li>• The activity is appropriate for the outcomes being assessed</li> <li>• The activity forms part of the learning and has clear links to learning goals</li> <li>• The activity shows the knowledge, skills and understanding that are being built on</li> </ul>
Assessment principle 2	Related criteria
<b><i>The activity clearly expresses for the student and teacher the goals of the learning activity</i></b>	<ul style="list-style-type: none"> <li>• The link between the marking guidelines and/or criteria for judging performance and the outcomes is clear and explicit</li> <li>• The language of the marking guidelines and/or criteria for judging performance and the outcomes is clear and explicit</li> <li>• The activity clearly indicates the knowledge, skills and/or understanding to be developed</li> </ul>
Assessment principle 3	Related criteria
<b><i>The activity reflects a view of learning in which assessment helps students learn better, rather than just achieve a better mark</i></b>	<ul style="list-style-type: none"> <li>• The activity has the capacity to engage the learner</li> <li>• The activity has been designed to target skills and understandings that lead to deeper learning as well as knowledge</li> <li>• The activity models an approach that has the activity as an integral component of the learning</li> </ul>
Assessment principle 4	Related criteria
<b><i>The activity provides ways for students to use feedback from assessment</i></b>	<ul style="list-style-type: none"> <li>• Marking guidelines and/or criteria for judging performance reflect the nature and intention of the activity and will be expressed in terms of the knowledge and skills demanded by the activity</li> <li>• Marking guidelines and/or criteria for judging performance enable meaningful and useful information on performance, relative to the outcomes, to be gathered and reported</li> </ul>
Assessment principle 5	Related criteria
<b><i>The activity is designed so as to help students take responsibility for their own learning</i></b>	<ul style="list-style-type: none"> <li>• The activity models ways that self and peer-assessment can be used as valid means of assessment</li> </ul>
Assessment principle 6	Related criteria
<b><i>The activity has been designed so as to be inclusive of all learners</i></b>	<ul style="list-style-type: none"> <li>• The activity is inclusive of gender, ethnicity, and a variety of socio-economic and geographical groupings</li> </ul>

### **3.5 Sharing Learning and Assessment Intentions**

Students must be aware of what they need to do to demonstrate evidence of learning. This information could be conveyed informally or formally by the teacher, as appropriate for the learning activity. Students should be informed of the criteria that will be used to assess their learning. They should be clear about the meaning of the language used, and the subject-specific terminology. They also need to be clear about any sources or stimulus material that are appropriate to the activity.

It may be helpful to give students models of good responses and templates, or procedures to help them demonstrate the extent of their knowledge, understanding and skills.

### **3.6 Effective Feedback to Students**

The aim of feedback is to communicate to students how well their knowledge, understanding and skills are developing in relation to the outcomes. Feedback enables students to recognise their strengths and areas for development, and to plan with their teacher the next steps in their learning. They are then given opportunities to improve and further develop their knowledge, understanding and skills.

Teacher feedback about student work is essential for students and is integral to the teaching and learning process. Student self-reflection and peer evaluation can also provide valuable feedback to students. Students should be provided with regular opportunities to reflect on their learning.

Feedback should:

- focus on the activity and what was expected
- be constructive, providing meaningful information to students about their learning
- correct misunderstandings
- identify and reinforce students' strengths and state clearly how students can improve.

Forms of feedback include:

- oral discussion with class, groups or individual students
- written annotations
- general comments to the class about those aspects of the activity in which students excelled and those aspects that still need addressing
- examples of good responses
- peer evaluation and self-evaluation.

### **3.7 Recording Evidence for Assessment**

Recording student performance needs to be manageable. Teachers should make decisions about which aspects of student performance on an activity should be recorded, and in what format. The teacher can use this information to ascertain students' progress, what needs to be taught next and to what level of detail, and to form a judgement of student achievement at key points.

Record-keeping should reflect the reporting processes of the school and may take the form of individual comments or notations, marks, grades or visual representations for the activities.

A scale such as the one below may be a useful way to summarise the extent of students' learning. This example shows how individual students performed on the same assessment activity.

Student	Activity 1 – Influences on Costume Design		
A			x
B	x		
C			x
D	x		
E		x	
F	x		
	Progressing	Satisfactory	High

This method can be adapted to capture evidence of an individual student's strengths and weaknesses on various elements of one activity, or the performance of a particular student, class, group or cohort of students, across a range of assessment activities.

## **4 Programming Units of Work**

The *Textiles Technology Years 7–10 Syllabus* promotes an approach to programming which has the outcomes as the focus. The sample units of work in Section 5 have been developed using the following process:

### **Step 1**

- a) Select the focus area. Focus areas are intended to encourage students to engage with a range of textile items and cater for a variety of student's interests.
- b) Decide on the project work which will form the basis of each unit of work
- c) Select outcomes that will be addressed in the unit of work.

### **Step 2**

Decide on the specific evidence of learning to be observed through the teaching, learning and assessment activities. This evidence will enable judgements to be made of student achievement in relation to the outcomes and identified content.

### **Step 3**

- a) Select the relevant syllabus content (ie identifying what students are going to 'learn about' and 'learn to'). Content from the 'learn about' and 'learn to' columns are selected and organised into a logical sequence. The amount of content selected should be manageable in the time allocated to the unit.
- b) Plan the teaching and learning strategies for the identified content and decide on the assessment for learning strategies that provide the evidence of learning. *Assessment for learning* activities occur as a normal part of the teaching process. Strategies should include a range of student-centred experiences that promote the development of knowledge, skills and understanding. Teachers should ensure that practical experiences occupy the majority of class time.

### **Step 4**

Plan feedback, which provides students with the necessary information and direction to progress their learning. Teachers should consider how to maximise feedback in the context of the teaching, learning and assessment activities, and how feedback contributes to student learning.

### **Step 5**

Reflect on previous steps and evaluate the degree to which the unit has remained focused on the outcomes.

### 4.1 Sample Unit Proforma

Teachers can design unit proforma that best meet their specific needs and circumstances. This sample unit proforma provided below has been annotated to highlight characteristics of each section.

<b>Unit title:</b>				
<b>Unit description:</b>		<b>Outcomes:</b>		
Identify the focus area to be addressed in the unit of work to ensure the syllabus requirements are met.		Ensure they are manageable in number, as not all outcomes have to be addressed in every unit of work. However, as project work forms the basis of every unit of work the outcomes linked to project work should be included in every unit.		
Focus area: Project work:		Project work forms the basis of every unit of work.		
<b>Length of unit:</b>				
<b>Resources:</b>				
Identify the resources necessary for the unit of work.				
<b>Students learn about:</b>	<b>Students learn to:</b>	<b>Integrated learning experiences, instruction and assessment:</b>	<b>Evidence of learning:</b>	<b>Feedback:</b>
Identify the content appropriate to the selected outcomes. Ensure it is manageable in the time allocated.		Describe learning experiences, instruction and assessment best suited to the syllabus content and that allow students to provide the required evidence of learning in relation to the outcomes.	Decide on the observable evidence resulting from the activity that will allow judgments to be made on achievement in relation to outcomes.	Identify the type of feedback and how it contributes to student's learning.

## **5 Sample Units of Work**

The sample units of work that follow are designed to assist teachers in planning for the implementation of the *Textiles Technology Years 7–10 Syllabus*. The units provide programming ideas for selected syllabus content.

The sample units provide opportunities for students to engage in questioning and dialogue, self-assessment, peer assessment and reflection. Through these activities students can become clear about their own learning, understanding and needs.

The sample units show ways in which teachers can meet the needs, interests and abilities of their students, while assessing their progress towards a demonstration of outcomes. The sample units also illustrate ways in which assessment activities may be integrated into the teaching and learning sequence. They will assist teachers to understand the importance of:

- being explicit about the outcomes and content they are addressing
- being explicit about the evidence required to demonstrate student learning
- providing meaningful feedback to students
- adapting teaching and learning programs to students' demonstrated needs
- having a sound basis for modifying future teaching and learning programs (in light of students' demonstrated needs).

Note that the assessment activities are described here in some detail to illustrate the process of *assessment for learning*. Teachers would not provide this level of detail in day-to-day classroom situations.

## 5.1 Stage 5 Sample Unit of Work: Time For Bed

<b>Unit title: Time for Bed</b>	
<p><b>Unit description:</b> Function and performance are important criteria in the design of textile items. In this unit students deconstruct various sleepwear items and consider how functional properties and aesthetic aspects relate to the end use of an item. Students identify component parts of each item, examine materials used in their manufacture and justify their use. Using Information and Communication Technologies (ICT) students investigate the historical development of sleepwear and how designers produce sleepwear as fashion statements in today’s market. <b>Project work involves the design and production of embellished hand-felted slippers and production of pyjamas using commercial patterns.</b></p>	<p><b>Outcomes</b> A student: 5.1.1 explains the properties and performance of a range of textile items 5.1.2 justifies the selection of textile materials for specific end uses 5.2.3 investigates and applies methods of colouration and decoration for a range of textile items 5.3.1 analyses the influence of historical, cultural and contemporary perspectives on textile design, construction and use 5.4.1 selects and uses appropriate technology to creatively document, communicate and present design and project work 5.5.1 critically selects and creatively manipulates a range of textile materials to produce quality textile items 5.5.2 selects appropriate techniques and uses equipment safely in the production of quality textile projects 5.5.3 demonstrates competence in the production of textile projects to completion 5.6.1 evaluates textile items to determine quality in their design and construction</p>
<p><b>Focus area:</b> Apparel <b>Project work:</b> Hand-felted slippers, pyjamas using commercial patterns <b>Length of unit:</b> 10 weeks</p>	
<p><b>Resources:</b></p> <ul style="list-style-type: none"> <li>stimulus materials – magazines and catalogues illustrating sleepwear and associated accessories</li> <li>various fabric samples, including examples of woven, knitted and non-woven</li> <li>pic glasses</li> <li>examples of felted products including hand-felted slippers</li> <li>felting materials and embellishment materials</li> <li>slipper patterns, suitable to be made from felted materials</li> <li>various samples of sleepwear – to be deconstructed</li> </ul>	<p><b>Useful websites:</b></p> <ul style="list-style-type: none"> <li><a href="http://www.cyberfibres.rmit.edu.au/links.htm">www.cyberfibres.rmit.edu.au/links.htm</a> (an online registry of Australian Fashion and Textile and Design)</li> <li><a href="http://www.feltcrafts.co.nz">www.feltcrafts.co.nz</a></li> <li><a href="http://www.feltmaking.dk/english">www.feltmaking.dk/english</a></li> <li><a href="http://www.allfibresarts.com/cs/feltinghtm">www.allfibresarts.com/cs/feltinghtm</a></li> </ul>

### **5.1.1 Sample assessment for learning activity: Slipper Deconstruction**

#### **Context**

This activity is from an early Year 9 unit of work, Time for Bed, in Stage 5 Textiles Technology. It will assist students to develop an understanding of the link between the performance criteria and the selection of materials for a textiles item.

Prior to this activity students have sketched and labelled a pair of commercially-produced slippers provided by the teacher showing the front, back and top views. Students will complete a deconstruction activity, listing the main component parts of the slippers and identifying the materials used. Students will describe the properties of the materials and justify their selection.

Project work for this unit requires students to design, produce and evaluate hand-felted slippers.

#### **Outcomes**

A student:

- 5.1.1 explains the properties and performance of a range of textile items
- 5.1.2 justifies the selection of textile materials for specific end uses.

#### **Description of activity**

The teacher has provided the class with a pair of commercially produced slippers for the deconstruction activity. Students have sketched and labelled the slippers. The teacher explains the term ‘performance criteria’ and differentiates between functional properties and aesthetic aspects of textile items.

This assessment activity requires students to:

- explain the performance criteria of the slippers, making a distinction between functional properties and aesthetic aspects
- deconstruct the slippers by separating the component parts
- identify the component parts of the slipper
- describe the properties of the materials used, justifying their selection according to the slippers’ performance criteria.

#### **Criteria for assessing learning**

(These criteria would normally be communicated to students with the activity.)

Students will be assessed on their ability to:

- explain the performance criteria of the commercially manufactured slippers, and distinguish between functional properties and aesthetic aspects.
- identify the main parts of the slippers
- identify the material used for each part and describe the properties of the materials used
- justify the selection of materials, using appropriate textiles terminology, clearly linking to performance criteria explained previously.

#### **Guidelines for marking**

The following guidelines for marking show one approach to assigning a value to a student’s work. Other approaches may be used that better suit the reporting process of the school. Categories, marks, grades, visual representations or individual comments / notations may all be useful.

Range	A student in this range:
<b>8–10 (High)</b>	<ul style="list-style-type: none"> <li>• explains performance criteria typical of a pair of commercial slippers, making a clear distinction between functional properties and aesthetic aspects</li> <li>• justifies performance criteria according to expected use</li> <li>• identifies all of the main component parts of the slipper (ie upper, inner sole, sole/base, lining)</li> <li>• accurately identifies the variety of materials used in the manufacture of the slippers and explains the properties of materials, justifying their selection by clearly linking to performance criteria previously explained</li> <li>• uses correct terminology, demonstrating an extensive understanding of textile materials and their use</li> </ul>
<b>4–7 (Satisfactory)</b>	<ul style="list-style-type: none"> <li>• describes performance criteria typical of a pair of commercial slippers, making some distinctions between functional properties and aesthetic aspects</li> <li>• justifies performance criteria according to expected use</li> <li>• identifies the main parts of the slipper (ie upper, inner sole, sole/base, lining)</li> <li>• identifies materials used in the manufacture of the commercial slippers and describes the properties of materials justifying their selection by linking to performance criteria previously described</li> <li>• uses terminology indicating a sound understanding of textile materials and their use</li> </ul>
<b>1–3 (Progressing)</b>	<ul style="list-style-type: none"> <li>• identifies some performance criteria typical of a pair of commercial slippers. Some attempt at justification of performance criteria attempted with teacher's support</li> <li>• lists some of the parts of the slipper (ie upper, inner sole, sole/base, lining)</li> <li>• identifies some materials used in the manufacture of the commercial slippers and describes some properties of materials used in the manufacture of the slippers, making limited links to performance criteria previously identified</li> <li>• uses limited terminology indicating a developing understanding of textile materials and their use.</li> </ul>

### Feedback

Written changes will inform students about such things as their:

- understanding of performance criteria and their ability to differentiate between functional properties and aesthetic aspects of the slippers
- understanding of materials and their properties to address performance criteria of the slippers
- use of appropriate/correct textile terminology.

This may be followed by the teacher leading a class discussion on predicting the performance criteria of other textile items, materials used in textile items and justification of their use. Teacher may also discuss the use of textile terminology to enhance written responses.

### Future directions

After this activity students will begin the process of designing and producing their own pair of hand-felted slippers. This activity should prepare them by ensuring they understand performance criteria and can differentiate between functional properties and aesthetic aspects of textiles items. Students should be capable of making informed choices about suitable materials when designing and manufacturing their slippers.

## 5.2 Stage 5 Sample Unit of Work: The World is a Stage

<b>Unit title: The World is a Stage</b>	
<p><b>Unit description:</b>                  Designing costume for theatre and film presents new challenges and endless creative possibilities. In this unit students examine the work of theatrical costume designers from a variety of films. By investigating how historical, cultural and contemporary sources of inspiration influence the designer students develop an understanding of the creative process. They engage in a mask-making activity to stimulate ideas for their project work. <b>Project work for this unit requires students to design, produce and evaluate a theatrical costume or accessory from an identified source of inspiration, documenting and justifying the selection of materials, equipment and techniques.</b></p>	<p><b>Outcomes</b>                  A student:</p> <ul style="list-style-type: none"> <li>5.1.1 explains the properties and performance of a range of textile items</li> <li>5.1.2 justifies the selection of textile materials for specific end uses</li> <li>5.2.1 explains the creative process of design used in the work of textile designers</li> <li>5.2.2 generates and develops textile design ideas</li> <li>5.2.3 investigates and applies methods of colouration and decoration for a range of textile items</li> <li>5.3.1 analyses the influence of historical, cultural and contemporary perspectives on textile design, construction and use</li> <li>5.4.1 selects and uses appropriate technology to creatively document, communicate and present design and project work</li> <li>5.5.1 critically selects and creatively manipulates a range of textile materials to produce quality textile items</li> <li>5.5.2 selects appropriate techniques and uses equipment safely in the production of quality textile projects</li> <li>5.5.3 demonstrates competence in the production of textile items to completion</li> <li>5.6.1 evaluates textile items to determine quality in their design and construction</li> </ul>
<p><b>Focus area:</b> Costume  <b>Project work:</b> Theatrical costume or accessory  <b>Length of unit:</b> 20 weeks</p>	
<p><b>Resources:</b></p> <ul style="list-style-type: none"> <li>• videos or DVDs which illustrate examples of theatrical costumes such as <i>Star Wars Episode One: The Phantom Menace</i></li> <li>• <a href="http://www.starwars.com/episode-I">www.starwars.com/episode-I</a> (costume design)</li> <li>• images of national costumes</li> <li>• samples of colouration and decoration techniques</li> <li>• examples of various theatrical costume and accessories: these may be from amateur production, children’s ‘dress up’ clothes, dance costumes etc</li> <li>• fabric samples, including natural, manufactured and blended fibre content</li> </ul>

## **5.2.1 Sample assessment for learning activity: Influences on Costume Design**

### **Context**

This activity is from the first Year 10 unit of work, *The World is a Stage*, in Stage 5 Textiles Technology. In this unit students will examine the work of theatrical designers and explore the creative process used in the development of costume designs. Project work for this unit requires students to design, produce and evaluate a theatrical costume from an identified source of inspiration.

Prior to this activity students have discussed a range of well-known films and associated costuming. After viewing stimulus materials students will describe how a designer initiates the creative process in the development of a theatrical costume. They will sketch one theatrical costume and label design features from the collection showcased in the stimulus material. Students will describe how historical, cultural and contemporary perspectives have influenced the design of the costume.

### **Outcomes**

A student:

- 5.2.1 explains the creative process of design used in the work of textile designers
- 5.3.1 analyses the influence of historical, cultural and contemporary perspectives on textile design, construction and use
- 5.4.1 selects and uses appropriate technology to creatively document, communicate and present design and project work.

### **Description of activity**

Students view and discuss the stimulus material provided by the teacher. The stimulus material showcases a collection of costumes from a well-known film, describing how the designer found inspiration for the costumes.

The assessment activity requires students to:

- sketch one costume and label the design features
- explain how the designer uses sources of inspiration and describe how historical, cultural and/or contemporary perspectives have influenced the design.

### **Criteria for assessing learning**

(These criteria would normally be communicated to students with the activity.)

Students will be assessed on their ability to:

- explain the creative process used by theatrical designers to initiate inspiration for the costume designs
- produce quality labelled sketches that clearly communicate design work
- identify and describe the historical, cultural and contemporary perspectives that have influenced the final costume design.

### **Guidelines for marking**

The following guidelines for marking show one approach to assigning a value to a student's work. Other approaches may be used that better suit the reporting process of the school. Categories, marks, grades, visual representations or individual comments/notations may be useful.

Range	A student in this range:
<b>8–10 (High)</b>	<ul style="list-style-type: none"> <li>• identifies sources of inspiration used by the designer, explaining how design features have been incorporated into a costume</li> <li>• produces appropriately labelled high quality sketches clearly identifying design features as historical, cultural and/or contemporary</li> <li>• explains historical, cultural and/or contemporary perspectives, which have influenced the final costume design</li> </ul>
<b>4–7 (Satisfactory)</b>	<ul style="list-style-type: none"> <li>• identifies sources of inspiration used by the designer, describing design features incorporated in the costume</li> <li>• produces labelled medium quality sketches identifying design features as historical, cultural and/or contemporary</li> <li>• describes historical, cultural and/or contemporary perspectives, which have influenced the final costume design</li> </ul>
<b>1–3 (Progressing)</b>	<ul style="list-style-type: none"> <li>• identifies some sources of inspiration used by the designer</li> <li>• produces simple sketches, with minimal labelling and limited reference to design features as historical, cultural and/or contemporary</li> <li>• identifies some historical, cultural, and/or contemporary perspectives, which have influenced the final costume design.</li> </ul>

### Feedback

Written comments will inform students about such things as:

- their identification of sources of inspiration used by the designer
- the clarity and accuracy of their sketched and labelled costume, clearly identifying design features
- their explanations of how various perspectives (historical, cultural and contemporary) have influenced the final design.

A class discussion could follow which helps students further understand the work of the designers. Focus questions might include: What sort of message is the designer communicating when they create a costume for a particular character? How do the costumes enhance the character’s role? Examples of costumes from other films could also be discussed to reinforce points made.

### Future directions

This activity helps students’ understanding of the creative process when designing with textiles. They recognise that designers create innovative costumes using historical, cultural and contemporary sources of inspiration. This knowledge can be further applied as students model the work of costume designers in the production of project work.
