Question 14 2011 HSC Design and Technology Band 1/2 Sample 2

Start here.

**Question (a)**

Designers look whether the existing product is useful so they can change the product for future development. Designer checks if the products succeed in the future.

The should undertake the safety and for the environment and friendly of an existing product before they design it or make it. But the big concerns for the designer should authorize if the product is costable and maintain resources for future use.

**Question (b)**

Because it is necessary to further develop an existing product for the society or environment, maybe the current model is not suitable. As existing once, so it is very necessary to change the existing product can develop into different conceptual and new product and with different unique futures. Designers see if the existing product not same or current one so they can develop changes into the product.
