(b) The socioeconomic status for Indigenous people is lower than the socioeconomic status of the non-Indigenous population.

Indigenous ~~people~~ peoples health initiatives ~~are~~ still need improving ~~to~~ to 'close the gap' between the health initiatives of Indigenous and non-Indigenous peoples.

~~Indigenous peoples health initiatives need some~~

~~improvement~~ In order for the socioeconomic status for Indigenous people we still need to improve the health initiatives.

To improve Indigenous peoples health initiatives we need more health facilities especially in remote areas such as the Northern Territory in Australia which is mostly ~~populated~~ populated by Indigenous peoples. Whilst improving the health initiatives for the Indigenous community it will improve the life expectancy for Indigenous peoples.

If we can improve the life expectancy, ~~we~~ ~~people~~ have access to more health facilities and improve our health facilities

More Indigenous peoples will be more fit and ~~perhaps~~ ~~be~~ able to go out into the work force to earn income, which will improve the socioeconomic status of Indigenous people.

~~Indigenous communities~~ ~~of Australia~~ ~~are not~~ ~~the~~ ~~only~~ ~~Indigenous~~ ~~communities~~ ~~that~~ ~~need~~ ~~to~~ ~~improve~~ ~~their~~ ~~socioeconomic~~ ~~status,~~ ~~in~~ ~~fact~~ ~~all~~ ~~the~~ ~~Indigenous~~ ~~communities~~ ~~around~~ ~~the~~ ~~world~~ ~~are~~ ~~said~~ ~~to~~ ~~live~~ ~~in~~ ~~the~~ ~~poorest~~ ~~conditions~~ ~~and~~ ~~are~~ ~~known~~ ~~to~~ ~~live~~ ~~in~~ ~~'Third~~ ~~World~~ ~~'~~ ~~conditions.~~

One international Indigenous community that also needs to improve their socioeconomic status is the Lakota people, the Indigenous community of Canada. The Lakota people were colonised by the Europeans, the same as the ~~Indigenous~~ Indigenous communities <sup>here</sup> in Australia. Since the Lakota people were colonised they have fewer health initiatives and a lower socioeconomic status than the non-Indigenous population.
