

Question 28 (10 marks)

- (a) Explain a strategy that farmers use to manage the sustainability of water resources for agricultural production. **3**

Farmers may use farming techniques to use the minimal amount of water on a crop but get the biggest results possible. Building dams and rainwater tanks also holds the water until use and requires less water from rivers.

Question 28 (continued)

- (b) For a soil degradation problem, explain farm management practices that have contributed to the problem and a procedure that can be used to alleviate the problem.

7

With the ways most farming techniques are they damage the land increase erosion and destroy the soil. In order to ~~keep~~ keep land good enough for farming more suitable farm management techniques need to be used. Crop rotations and giving the land a break will keep away pest and diseases and keep the land in a more suitable condition to farm on.
