

Start here.

Part A.

1. Research is needed when developing agricultural technologies because the developer needs to have the correct information in order to develop a successful machine or way to better the agricultural world that ~~will~~ provides a ~~better~~ greater understanding of the agricultural business.

2. Reasons a new ~~technology~~ agricultural technology development may not be accepted by some farmers ~~be~~ could be because they do not fully understand the development, they may prefer they way their farm is without the development, they may think the development is too expensive and will not add it to their farm, they may not have the room for the development or the development may not suit their farm.

Part B.

The benefits of recent developments in the agricultural world are huge, for example the ~~milk~~ milk machine. This machine is an automatic milker. The cows can ~~go~~ get milked whenever they want, without the stress of being herded into a shed to be milked.

The machine knows if a cow has already been milked and ~~checks~~ checks the cows for mastitis while its being milked.

The benefits of this are the cows are more calm and relaxed, there is ~~not~~ stress involved, ~~and~~ and it is efficient and time saving.
