

Start here. Automotive shops, garages, factories are all taking on the challenge of advancing with the new technologies that is being brought to hand. They have to take what they can from the information in which they are supplied and put it in to practice. With more and more of the technology that has been supplied to the industry, cars, truck, busses etc. have all started to become some of the safest most comfortable vehicles that have ever been on the road. More materials being introduced such as carbon fibre parts to reduce weight or even a whole 3D printed car being introduced. The automotive industry is required to grow with all these new industry changes. Ensuring that we are becoming more efficient to the environment as well, we are making hybrid cars and electric cars to reduce harmful exhaust gasses being let into the atmosphere. Its not just the cars that are becoming more efficient, the businesses are always trying to find the best way to reduce risk to the environment whether it be updating to the newest, safety equipment or recycling more and more goods used, the industry is trying its best for everyone and everything in everyday life.
