

Question 28 (8 marks)

The flowchart shown outlines the sequence of steps used to determine the concentration of an unknown hydrochloric acid solution. 8

Describe steps **A**, **B** and **C** including correct techniques, equipment and appropriate calculations. Determine the concentration of the hydrochloric acid.

- (A) Preparation of Na_2CO_3 standard solution.
 By calculation. Molar M (Na_2CO_3) = 106

$$\text{M}(\text{Na}_2\text{CO}_3) = 0.5 \text{ L} \times \frac{0.1 \text{ mol}}{\text{L}} = 0.05 \text{ mol}$$

$$\therefore \text{M}(\text{Na}_2\text{CO}_3) = 106 \times 0.05 = 5.3 \text{ g}$$
- 1 - Prepare 5.3 g sodium carbonate powder by using a electricity balance scale to weigh.
 2 - dissolve the 5.3 g sodium carbonate powder completely using a ~~dry~~ clean beaker with small amount of distilled water
 3 - transfer the solution into a volumetric flask.
