

Start here.

Current technologies are allowing businesses including restaurants to improve efficiency and cut long term costs. Current trends show that manual tasks can be performed by technologies to improve efficiency and save money. As technology improves, this will be more relevant to a larger variety of more complicated tasks.

As a result of this, there are less job opportunities and people seek more specialised labour as technology cannot replace this yet.

An example of job replacement ~~is~~ are waiters being replaced with self serve menus that just require putting in the relevant information and taking an number and collecting your food accordingly. This is much more common in fast-food industry particularly the larger chains. This is because they can afford to invest in these technologies when it will pay ~~at~~ off over time as you do not need to pay them wages.

~~The~~ Technology has also allowed workplaces

to function more efficiently and  
save time. Dishwashers save huge amounts  
of time when they are used correctly  
in the kitchen. Communication technology  
has had a big impact as it enables  
workers to talk without having to physically  
find someone.

Technology is changing rapidly and new  
uses to save time and money will  
be implemented as ~~the~~ the technology  
emerges.
