Electronics and the latest technology can really help when it comes to education by correspondence and over large distances such as Australia.

There are many ways in which the online university can interact and talk with each other. They could set up a website or system that is a chat or text based system that allows them to talk to each other. In conjunction with this they could also use programs such as Skype or other video based communication to communicate. Whether it be friends talking about work or a teacher or lecturer taking a class these are both very valid ways in which the online university could interact with each other.

On the topic of accessing resources the university could use a program/website such as Moodle

where documents and links can be uploaded for the people enrolled in the course. For example this IT course could have been completed by correspondence as all the resources and tools we needed were uploaded to Moodle. A forum-like website could also be utilised not only as a resource center but as another way to communicate. A good example of this is the Board of Studies website.

When it comes to handing in work and assignments Moodle or Moodle like sites are also very helpful as due dates, drop boxes, resources and completion bars are all available which I believe is a great way to hand in assignments. However this would only effectively work if the task is to be completed digitally.

I believe accessing and utilising all the resources that

Additional writing space on back page.

The internet offers such as Moodle and other such communication websites and programs that we can communicate effectively over large distances. Whether it be for communication, handing in tasks or accessing resources it can be very easily done with the technology we have ~~today~~ today.
