

Start here.

a) the family will need to research that the new location will have all the supplies that they need and make sure there are workers and a demand on the product near the new locations. The market will be one of the main environmental effects of the expansion.

B) they will need to make sure that the new site will have enough space to store the supplies and the finished product. so they don't get damaged or affected when they are being transported to be used or sold. they will need to make sure the new work shed will be able to hold all the machines that are needed in the company and have a good safety plan for if there is an accident or a fire so nobody else gets hurt in the evacuation.

- they will need to make sure that they will be able to get enough power supply to the new company to power the new machines and the old machines with out always planning the circute to keep a stable speed in construction

and also make sure that they have enough staff to run the new size company and if anyone is away that they will have someone else trained to do the same job so the company won't come to a hold and stop all construction. they need to make sure that when they expand the company that they will also expand the sales rate so that they can pay for the expansion and still make a profit on the expansion and not have to let any workers off because of lack of money and ~~business~~ business.

They will have to make sure that their supplies can be delivered to the new site and there will be no point in expanding if you don't have more supplies to use.
